

The “Cutting Edge” of RM3P

7th Annual Northern Virginia Transportation Roundtable

Panel 2: NoVA InNoVates

About RM3P

RM3PVirginia.org

- ❑ A **data-driven** multi-modal mobility program comprising of 4 active projects:

- ❖ **Data-Exchange Platform (DEP)**
- ❖ **AI-Based Decision Support System (AI-DSS)**
- ❖ **Dynamic Incentivization (DI)**
- ❖ **Commuter Parking Information System (CPIS)**

- ❑ Aim to improve **safety, mobility, and reliability**

- ❑ Based on **Integrated Corridor Management (ICM)**
- ❑ **Strong, extensive partnership network**
- ❑ **RM3P Region: reflecting commute travel shed**

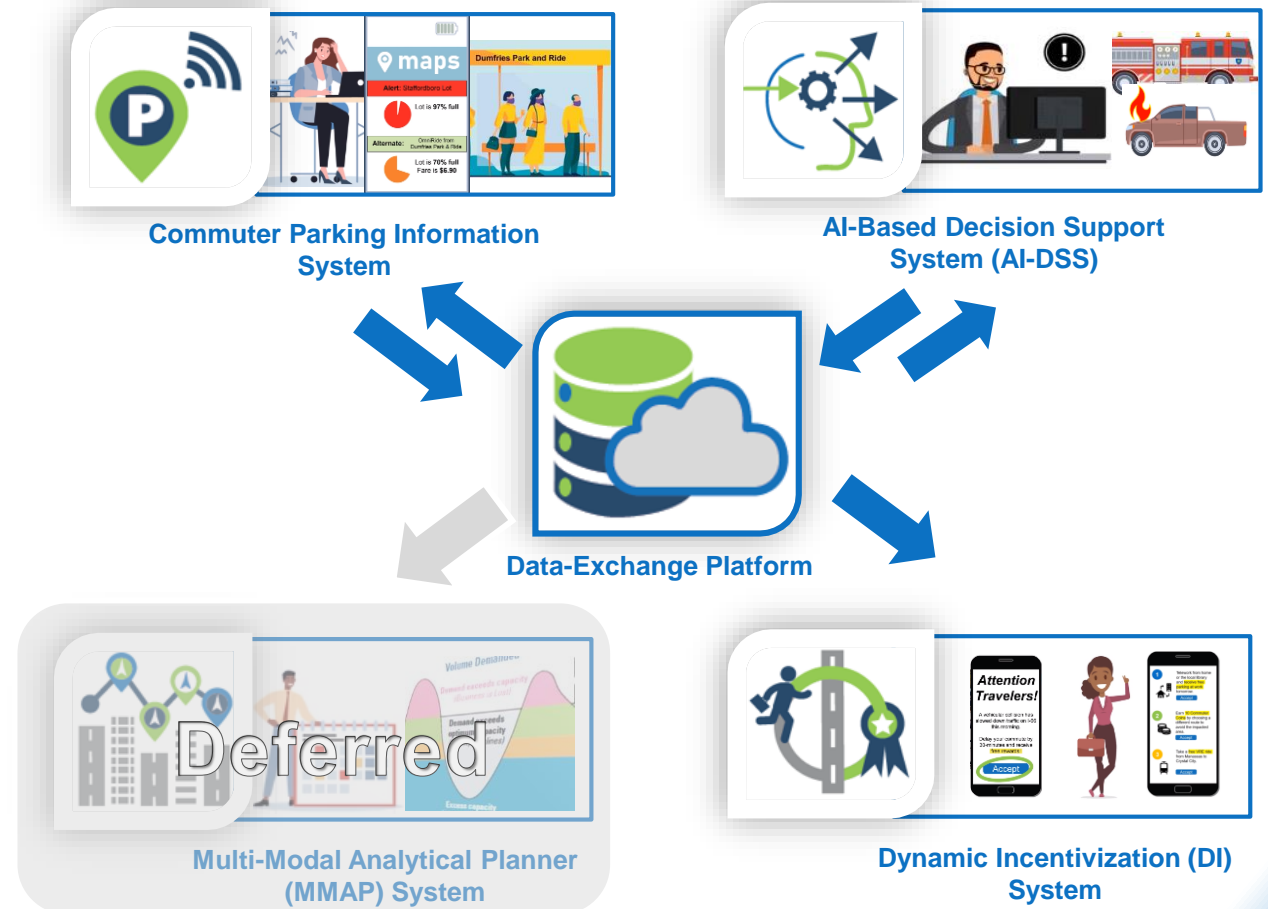

Regional Multi-Modal Mobility Program

The “Cutting Edge” of RM3P

RM3P is about working together as a community across modes, jurisdictions, and agencies.

- ❖ Regional matrix project management
- ❖ Agile management under a solid organization framework
- ❖ Agile development – implement rapidly and incrementally
- ❖ Data-driven
- ❖ Multi-modal incident response
- ❖ “Recruit” commuters as part of real-time transportation solutions

Data-Exchange Platform

<https://RM3P.RITIS.org/>

Approach

- Build on existing platform – RITIS
- Hybrid agile development process
- Project initiation – sufficient to begin development quickly
- Six epics – 3 months each
 - Launch during development
 - Rolling data discovering

Development Outcome

- Scalable data storage and exchange
- Capture, process, and exchange real-time and historic multi-modal travel conditions
- Harmonize data and made available via APIs
- Build in API Authentication

DEP harnesses transportation data to support improved responses and multi-modal decision-making both by public agencies and commuters.

Decision Support System

Approach

- **Hybrid agile development process**
 - Allow maximum flexibility within fixed boundaries
 - Multiple releases
- Walk, run before flying
- SaaS – technology trend
- Encourage innovation
- Encourage vendor to supplement additional data

Development Outcome

- AI prediction – proactive, rather than reactive, in incident response
- Multi-modal & multi-agency response
- Trigger to dynamically incentivize travelers – reduce demand on transportation networks
- Agency interface is adapted to agencies' capabilities

Dynamic Incentivization

Approach

- **Hybrid agile** development process
- Encouraged to make use of an existing app as the primary solution app
- **Consumer focus –**
 - Maximize user adoption and engagement
 - Driven by consumer desires and project goals
- Aim for financial sustainability over time

Development Outcome

- **Comprehensive programs –**
 - Dynamic – real-time, incentive offers
 - Challenges – short-term
 - Loyalty – long-term
- **Consumer Choices –**
 - System architecture to allow multiple app providers to access the incentive solutions
 - Progress towards incentive goals will accrue in a single place in the back-end
- **Ecosystem: $1+1 > 2$**
 - Business rules to complement existing TDM programs
 - Partner with and leverage existing TDM programs' extensive employer outreach framework

Commuter Parking Information System

Approach

- DaaS contract model - a turnkey service and a broad license for using and sharing of the data
- Require customized real-time data collection
- Real-time occupancy data collection – encourage infrastructure-free or infrastructure -light technique
- Accept real-time parking lot status
- Independent data validation
- Allow contract piggybacking

Join the RM3P Community

Agencies Now and Later

- ❖ Share your data with & use data from DEP
- ❖ Share your support of RM3P
- ❖ Join the DSS response community
- ❖ Co-promote the DI apps
- ❖ If your agencies own/operate commuter parking lots:
 - Make vendor access easy
 - Leverage RM3P parking contract for collecting data from more lots

Third-Party Providers

- ❖ Use data made available from the DEP and turn it into valuable information for your users
 - Include parking & bike share as part of a complete trip options
 - Include commuter lots to your parking related apps
 - Possibility is endless
 - Let's talk!
