

Ballot Sheets Report- Community Events

During the TransAction 2030 public involvement period, patrons were invited to prioritize projects in several corridors. This opportunity was provided at community events, as well as at www.transaction2030.com. There were eight separate ballot sheets, one for each of the major corridors in Northern Virginia. Several projects were listed for each corridor with the option of voting for the 1st, 2nd and 3rd choice. In this report, each corridor is listed in descending order according to the total number of votes for that corridor. The projects within each corridor are listed in descending order as well, according to the total number of votes for each individual project. For example, the I-66/US 29/US 50 corridor is first with a total of 1374 votes. The proposed project to extend Metrorail from Vienna to Centreville is listed first with a total of 392 votes, 203 for the first, 115 for the second, and 74 for the third choice.

For any of the following eight corridors, pick three projects and rank them with a 1 for your first choice, a 2 for your second, and a 3 for your third:
