I. INTRODUCTION

About the Northern Virginia Transportation Authority

The Northern Virginia Transportation Authority (NVTA) is focused on improving mobility in the Northern Virginia region through multimodal regional planning leading to investments which reduce congestion and deliver sound transportation solutions. It is with that focus and dedication that Authority members and staff have delivered – and continue to deliver – results that improve the region’s transportation network, with projects ranging from increased capacity for major transit projects to mega-projects that involve the expansion of roadway facilities and heavy rail transit lines.

Northern Virginia’s updated long-range transportation plan, TransAction, guides current and future decisions and investments for additional transportation projects. In the fall of 2017, the Authority completed its most recent update to this regional, fiscally and geographically unconstrained, multimodal long-range transportation plan. The process of updating TransAction included regional collaboration with the Authority’s nine member jurisdictions, regional agencies, stakeholders and citizens alike.

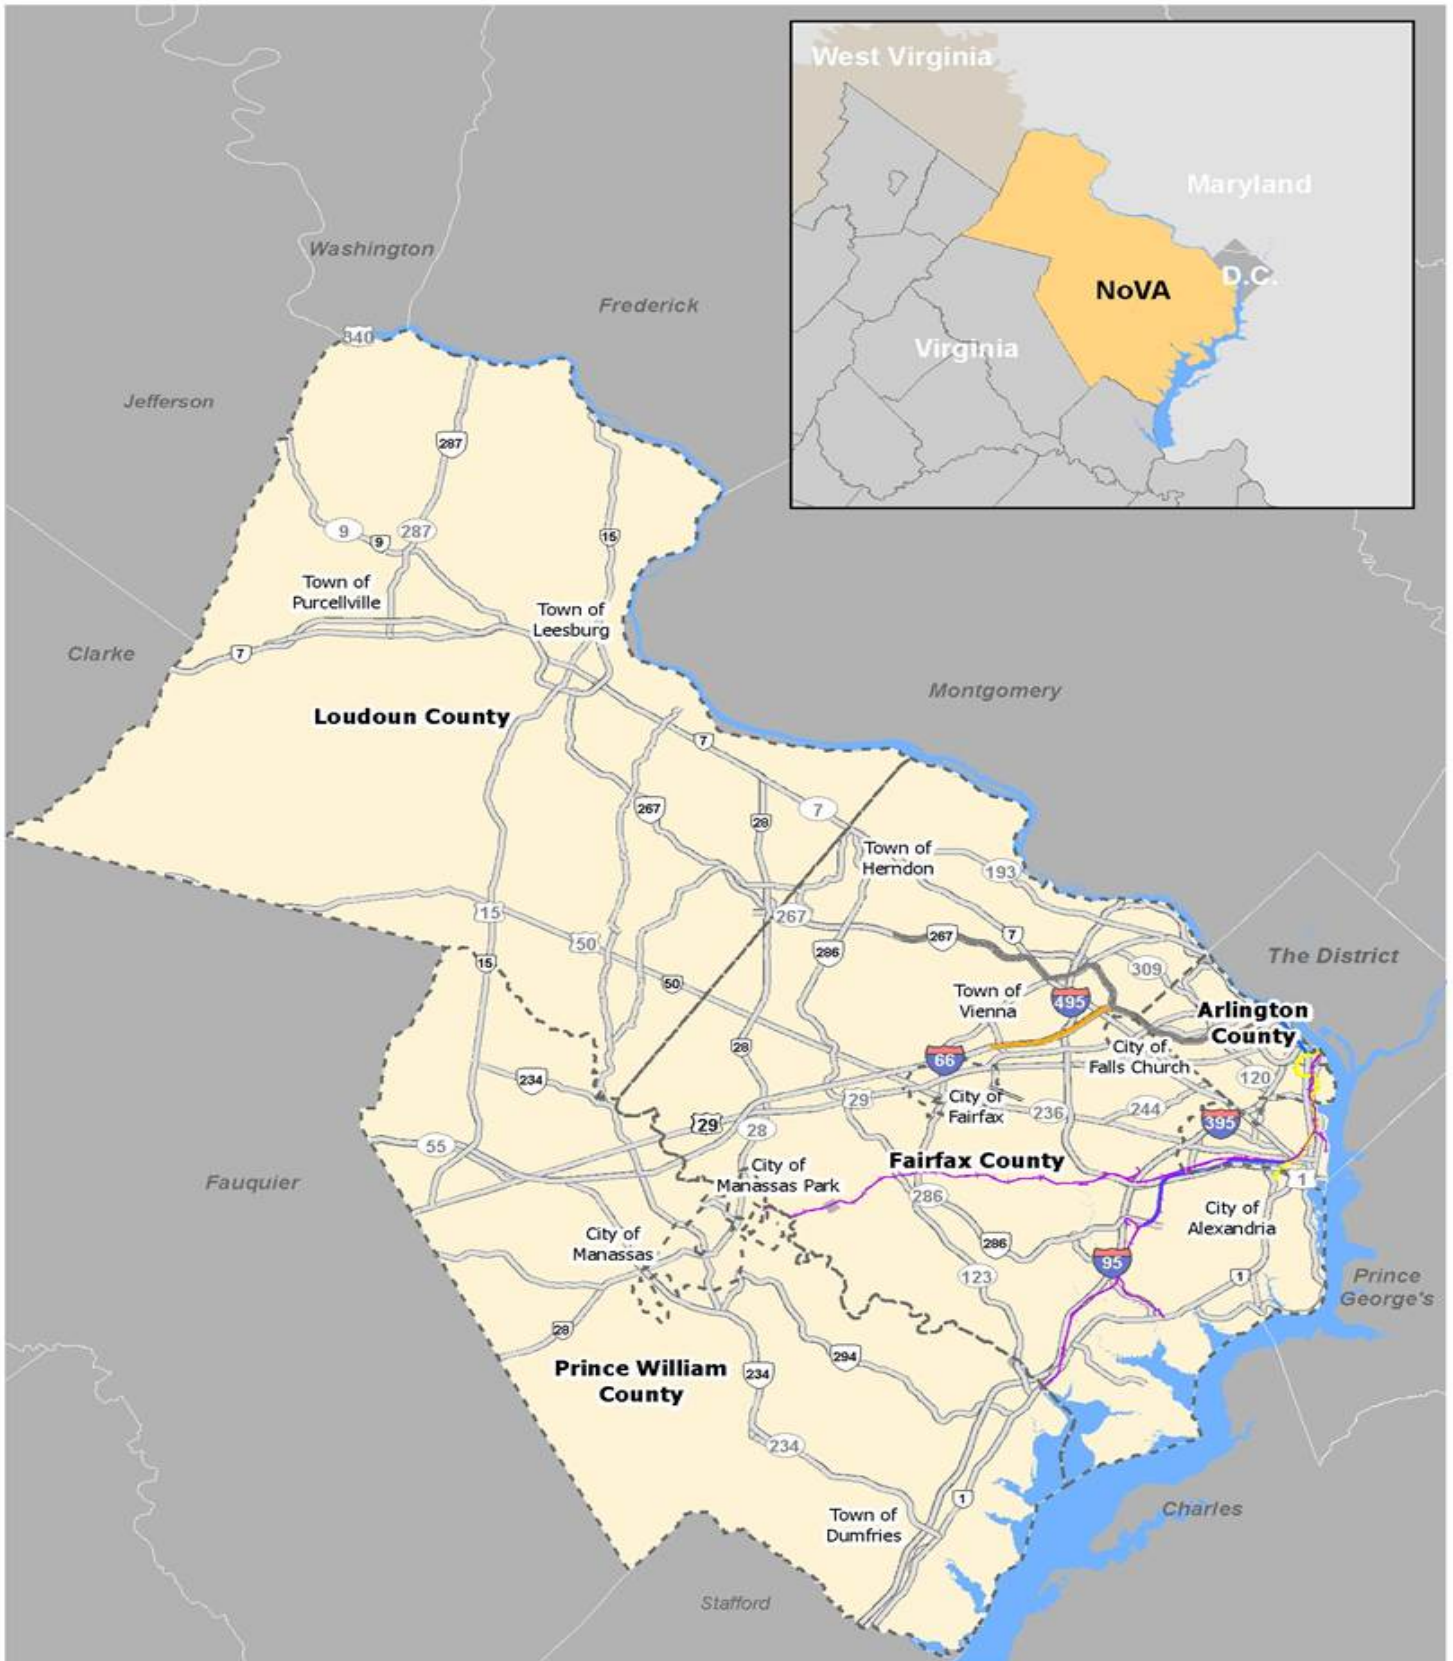

The Authority’s member jurisdictions include the counties of Arlington, Fairfax, Loudoun and Prince William and the cities of Alexandria, Fairfax, Falls Church, Manassas and Manassas Park. The Authority uniquely consists of each governing body’s chief elected officer or his or her designee. The NVTA functions as the regional planning body for these jurisdictions and transit agencies. Regional collaboration contributed to the Authority’s adoption of the TransAction Update.

“IN THE 21ST CENTURY, NORTHERN VIRGINIA WILL DEVELOP AND SUSTAIN A MULTIMODAL TRANSPORTATION SYSTEM THAT ENHANCES QUALITY OF LIFE AND SUPPORTS ECONOMIC GROWTH. INVESTMENTS IN THE SYSTEM WILL PROVIDE EFFECTIVE TRANSPORTATION BENEFITS, PROMOTE AREAS OF CONCENTRATED GROWTH, MANAGE BOTH DEMAND AND CAPACITY, AND EMPLOY THE BEST TECHNOLOGY, JOINING RAIL, ROADWAY, BUS, AIR, WATER, PEDESTRIAN, AND BICYCLE FACILITIES INTO AN INTERCONNECTED NETWORK THAT IS FISCALLY SUSTAINABLE.”

- VISION OF TRANSACTION

NVTA Jurisdictions and Major Transportation Facilities in Northern Virginia

About the NVTa's Six Year Program

Following the adoption of TransAction on October 12, 2017, the Authority issued the Call for Regional Transportation Projects to be funded through the Authority's Six Year Program. **The Authority adopted the inaugural FY2018–2023 Six Year Program on June 14, 2018.** The Program includes **44 regionally significant, multimodal transportation projects totaling \$1.285 billion.**

The Authority's milestone action marks the first time the regional transportation planning, programming and funding body has funded a six-year program. The Six Year Program also marks the first time the jurisdictions of Northern Virginia were able to forward-commit resources (FY2020 through FY2023) for significant transportation projects using funds solely raised in Northern Virginia.

NVTA provided \$3.2M in funding to NOVA Parks/Falls Church for the enhanced bike routes on the W&OD Trail through the SYP.

The Six Year Program is designed to deliver major improvements throughout the Northern Virginia region that will not only relieve congestion but also improve the quality of life for all Northern Virginians.

Through three previously adopted funding programs, the Authority has funded 78 transportation projects, valued at more than \$690 million. Now, with the newly adopted FY2018–2023 Six Year Program, **the Authority is advancing** through its regional revenues, **122 regionally significant, multimodal transportation projects, totaling more than \$1.975 billion** in transportation investments for Northern Virginia's transportation network.

NVTA funded \$39M towards a new ART operations and maintenance facility in Arlington through the SYP.

II. PROJECT PLANNING

Six Year Program Process: The Pathway to Adoption

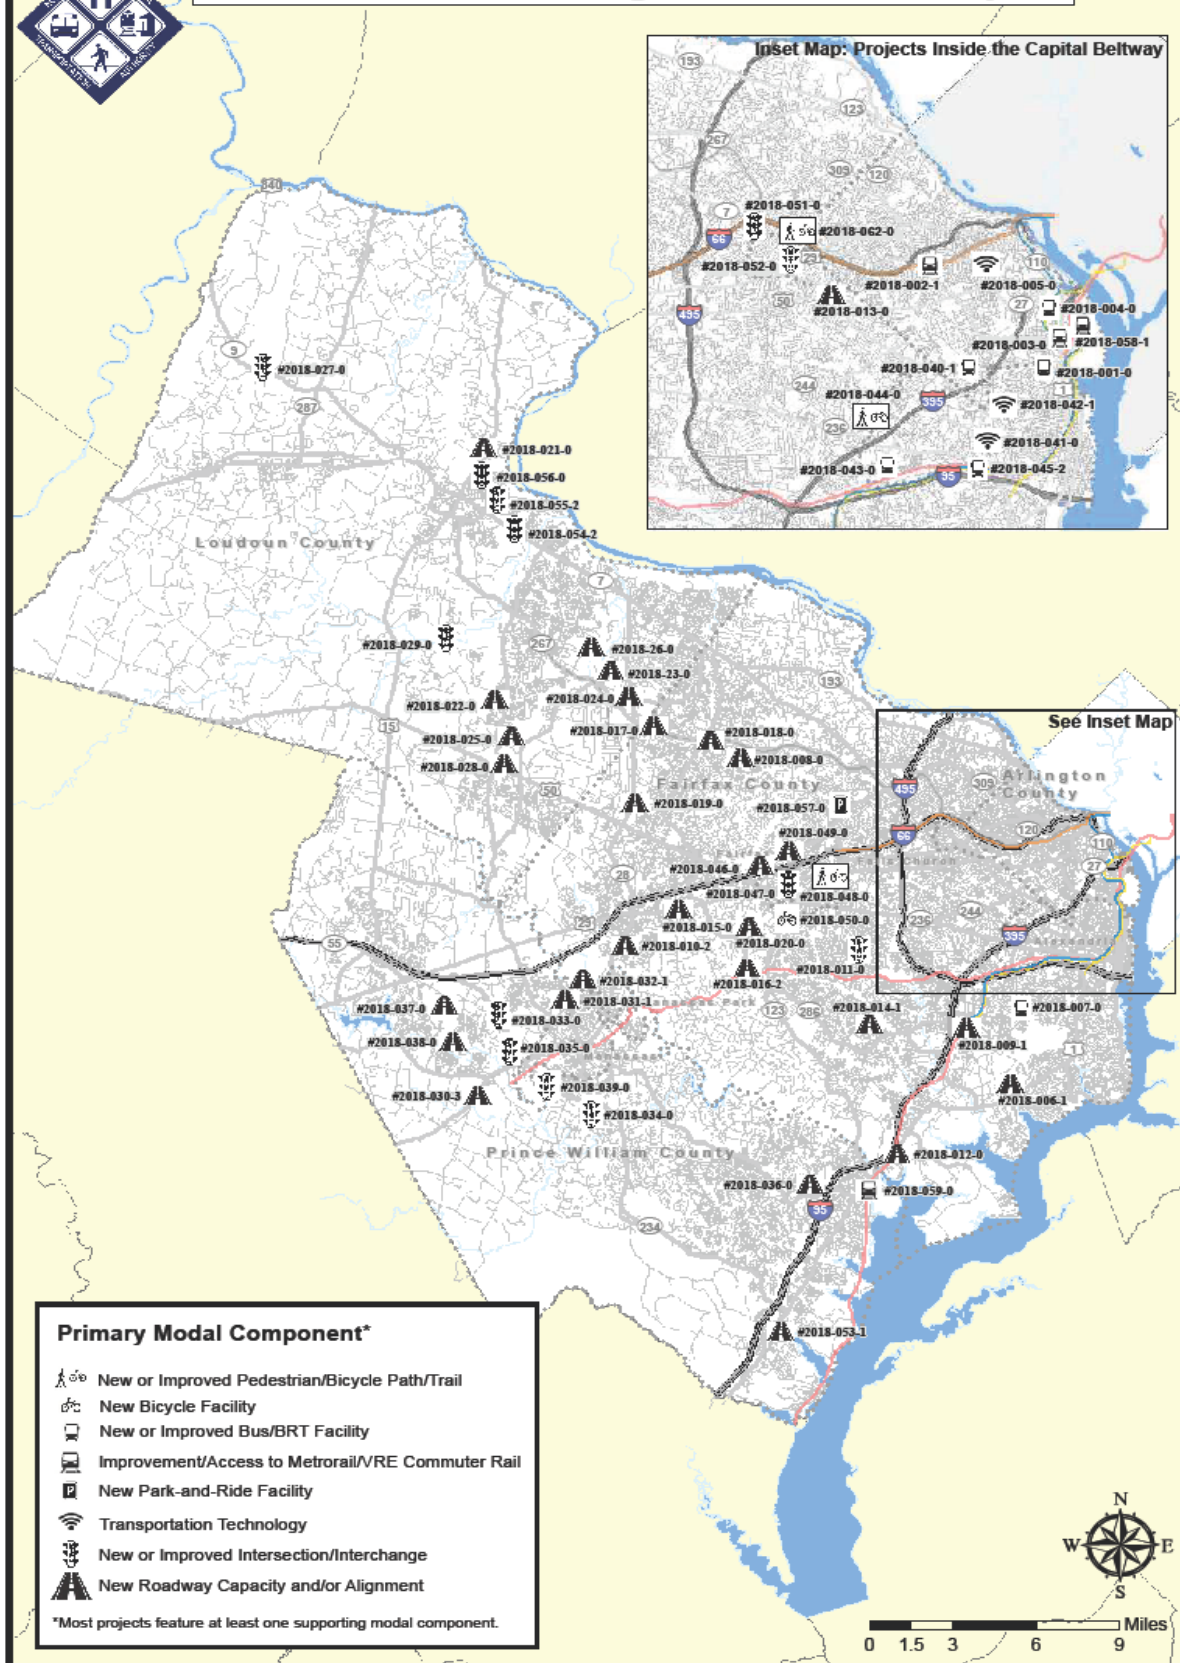

The Six Year Program is a first of its kind at the Northern Virginia Transportation Authority, but it did not happen overnight. The Authority allocated its FY2014-2017 Regional Revenues through three separate funding programs, referred to as the FY2014, FY2015-16, and FY2017 Programs. Projects included in each of these funding programs were selected from TransAction 2040, the Authority's long-range transportation plan, adopted in November 2012. TransAction 2040 was updated and replaced by a new long-range transportation plan, referred to simply as TransAction, in October 2017. Following adoption of this updated version of TransAction, NVTa issued a Call for Regional Transportation Projects and consequently developed its inaugural Six Year Program for FY2018–2023. Subsequently, the Six Year Program will be updated every two years.

The Authority evaluated **60 candidate regional projects under consideration for its inaugural FY2018–2023 Six Year Program**. Using information from the submissions for project funding, Authority staff created project description forms for all the candidate projects. Additionally, the Authority accepted public comments on all candidate projects, from April 13, 2018 through midnight on May 20, 2018. **The average funding request** associated with each candidate project was **more than \$41 million**.

Please see the FY2018-2023 Six Year Program Candidate Projects Map on the following page and pages 15 - 19 for the full list of Candidate Projects.

FY 2018-23 Six Year Program Candidate Projects

The Project Selection Process:

The Authority's project selection process was comprised of five components.

1. **Project Eligibility:** There are several pass/fail eligibility criteria that must be satisfied for a project to be funded using NVTAs regional (70%) revenues. Candidate projects must be included in the current version of TransAction. They must also be wholly or substantially located in Northern Virginia, unless appropriate revenue sharing arrangements with neighboring jurisdictions are in place.
2. **TransAction Project Ratings:** Previously referred to as HB 599 ratings, these are project level ratings derived from post-processing analyses using the 15 weighted performance measures incorporated into TransAction, the long-range transportation plan for Northern Virginia.
3. **Congestion Reduction Relative to Cost (CRRC) ratios:** These are project level ratios derived from an analysis of the reduction in person hours of delay (in 2025 and 2040) divided by estimated total project cost.
4. **Qualitative Considerations:** These include multiple factors that cannot be meaningfully evaluated under the previous two components. Factors may include modal and geographic balance, past performance and leveraging of non-NVTA regional revenues.
5. **Public Comment:** Leading up to the adoption of the Six Year Program, the Authority held a public comment period and outreach events from April 13, 2018 through May 20, 2018. The comment period and outreach efforts included a Public Hearing and various meetings and events across the region designed to gather feedback from Northern Virginians on the 60 candidate projects under consideration. With more than 115 in attendance and 60 registered speakers at an Open House and Public Hearing held at NVTAs, the Authority received input on various aspects of the projects, including congestion reduction benefits, safety and overall enhancements to the quality of life and business environment that the projects will provide. The Authority received more than 1,200 comments during the public comment period. Public input plays an integral role in the project selection process.

Once the Six Year Program’s public comment ended at midnight on May 20, 2018, Authority staff completed the project evaluation process and developed staff recommendations for the Six Year Program. Subsequently, staff recommendations were then shared with three of the Authority’s committees: first, with the Planning Coordination Advisory Committee (PCAC), second with the Technical Advisory Committee (TAC) and lastly with the Planning and Programming Committee (PPC). The PPC recommended to the Authority four changes to the staff recommendations.

During the **June 14, 2018** Authority meeting, with the PPC’s recommendations, the **NVTA unanimously adopted its inaugural Six Year Program** totaling more than \$1.285 billion. Members and meeting attendees celebrated the major milestone.

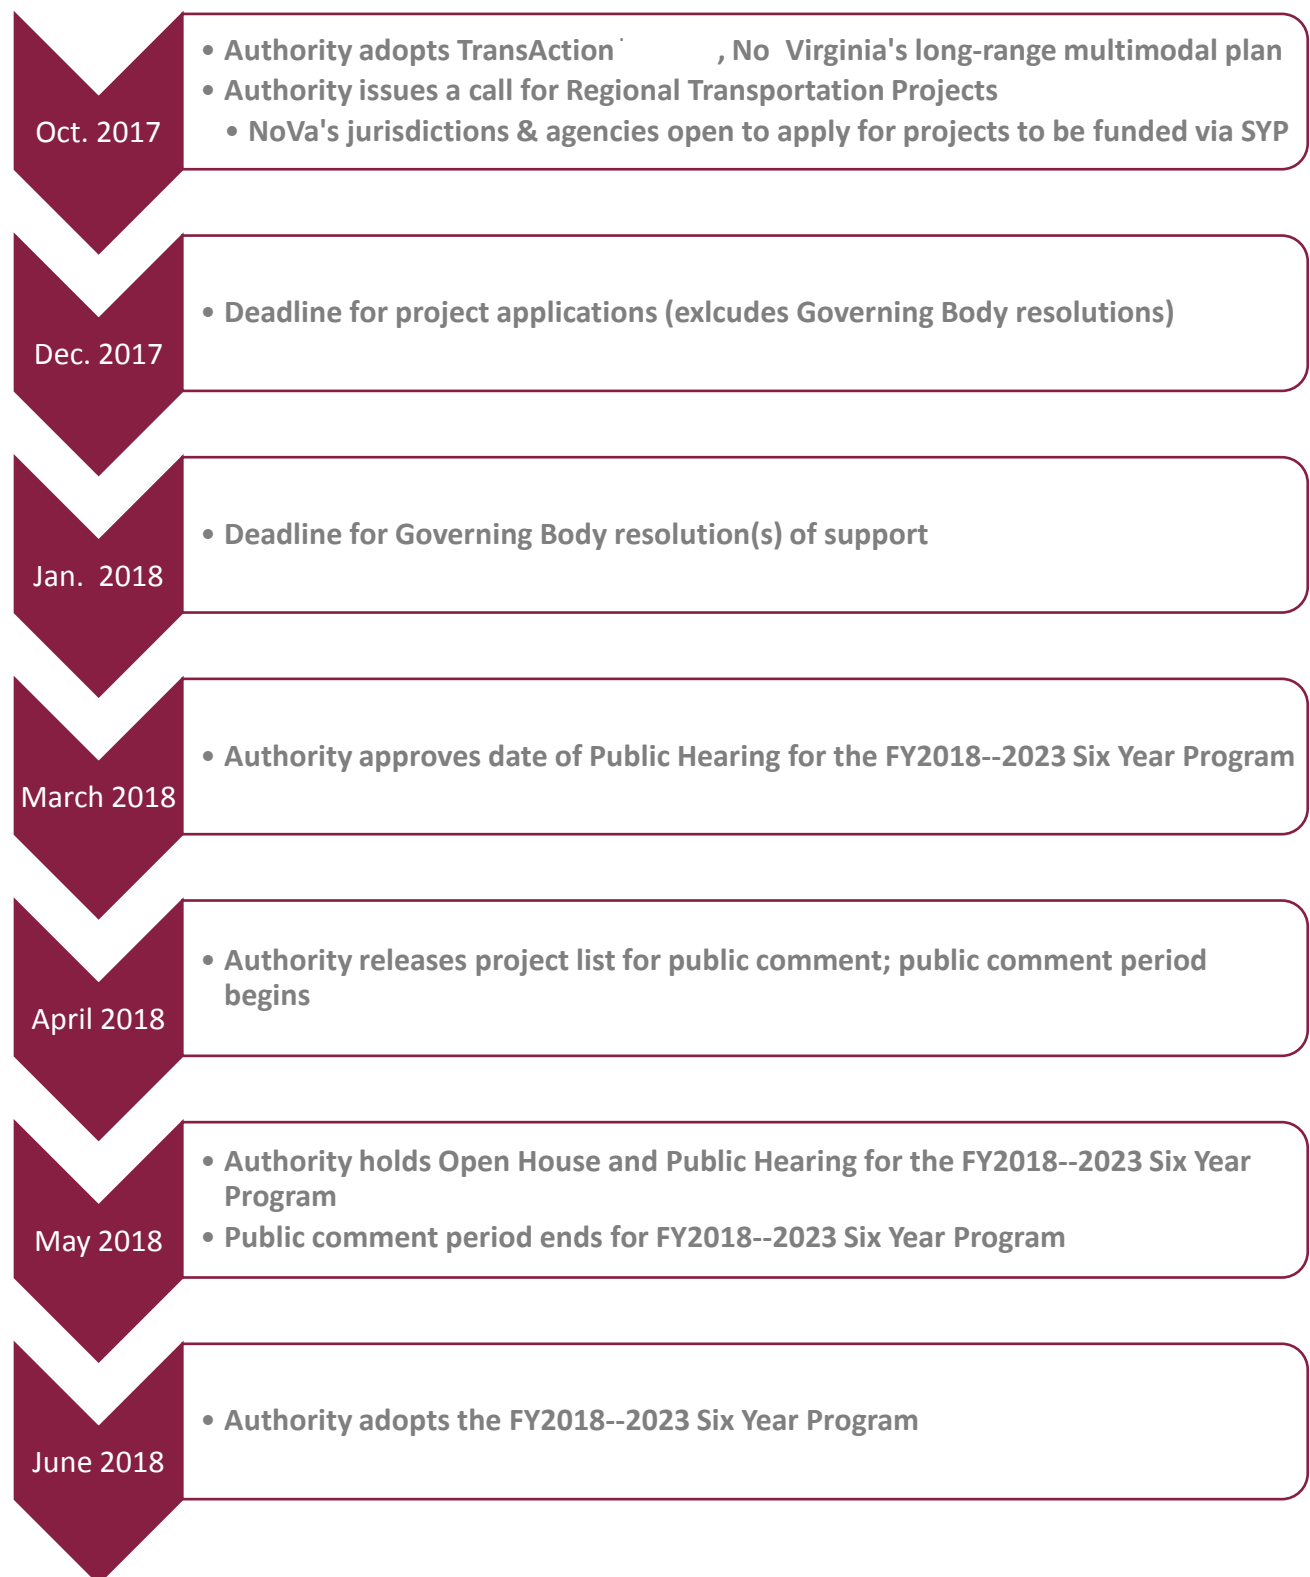

The **44 Six Year Program** projects chosen are designed to deliver **congestion relief** throughout Northern Virginia and **include a broad range of modal components**, such as pedestrian, bicycle, transit, rail, intersection improvements, highway improvements, park and ride, and transportation technologies.

Inaugural Six Year Program by the Numbers

60 candidate regional projects considered
\$41 million per project average funding request
1,200 plus public comments submitted to the Authority
44 Six Year Program projects chosen
\$29 million average funding for approved projects
\$1.285 billion project funding total

Path to the Inaugural FY2018–2023 Six Year Program Adoption

III. FY2018–2023 SIX YEAR PROGRAM PROJECTS

Process Statement

As mentioned previously, the NVTa's project selection process comprises five components:

- Project Eligibility;
- TransAction Project Ratings;
- Congestion Reduction Relative to Cost (CRRC) ratios;
- Qualitative Considerations; and
- Public Comment.

At the conclusion of the application period on December 15, 2017, 71 project applications had been received. Of these, eight projects were among those recommended by the Authority at its July 2017 meeting, for funding using the I-66 Outside the Beltway Concessionaire payment. The Commonwealth Transportation Board (CTB) subsequently approved these eight projects for funding and they were not considered as part of the Authority's SYP project selection process.

Of the remaining 63 projects, one Virginia Railway Express project was determined to be ineligible because it was physically located outside of Northern Virginia in the District of Columbia. **The remaining 62 project applications** were determined to be **eligible, fulfilling the dual requirements** to be included in the updated TransAction and be wholly/substantially located in Northern Virginia. Although, as will be noted later, two projects were subsequently withdrawn prior to the start of the public comment period.

The 62 eligible project applications then advanced to the quantitative and qualitative evaluation phases of the Authority's SYP project selection process. The quantitative evaluation utilized the TransAction Project Ratings and Congestion Reduction Relative to Cost (CRRC) ratios. The qualitative evaluation utilized other factors that were more subjective in nature.

The **TransAction Project Ratings**, previously referred to as HB599 ratings, utilized the 15 weighted performance measures used to evaluate the TransAction Plan. The 15 performance measures included the seven original measures used for the HB599 process (with a combined weighting of 45 percent) applied during evaluation of projects for the Authority's FY2015-16 and FY2017 Programs. (The HB599 process was not required for the Authority's FY2014 Program.) Individual TransAction Project Ratings for each of the 62 eligible projects were calculated using the TransAction simulation model for horizon year 2040. Two versions of the 2040 multimodal transportation network were modeled:

- The 2040 'No Build' network, including projects under construction or fully funded;
- The 2040 'Build' network, which additionally included the 62 eligible projects.

The rating for each project was based on a comparison of the two model runs. The Authority cannot fund any project using regional revenues for which an HB599-compliant evaluation has not been conducted. In conformance with the Code of Virginia requirements, the detailed TransAction Project Ratings are posted on VDOT's website, www.virginiadot.org, under the Projects & Studies tab/Northern Virginia/Evaluating Significant Transportation Projects.

The **Congestion Reduction Relative to Cost (CRRC) ratios** were calculated using a similar method as for the FY2017 Program, utilizing one of the fifteen performance measures - person hours of delay – in combination with total project cost (not just the requested NVTA share). Individual CRRC ratios for each of the 62 eligible projects were calculated individually using the TransAction simulation model for horizon years 2025 and 2040. Two versions of the 2025 and 2040 multimodal transportation network were modeled for each project:

- The 2025 and 2040 ‘No Build’ networks, including projects under construction or fully funded;
- The 2025 and 2040 ‘Build’ networks, which additionally included each eligible project in turn.

The ratio for each project was based on a comparison of the two model runs for 2025 and 2040 to determine the impact of each project on person hours of delay in each horizon year. A straight-line extrapolation was used between 2025 and 2040 to calculate the total annual change in person hours of delay. This extrapolation enabled annual person hours of delay to be aggregated between the project opening year and 2040. This aggregate value was divided by total project cost for each project, as provided in the project application form.

The **qualitative considerations** portion of the evaluation addressed factors that are relevant to the Authority’s SYP project selection process but do not readily lend themselves to quantitative analysis, and include:

- Past performance advancing projects previously funded using NVTA’s regional revenues. – Past performance was evaluated at the jurisdiction/agency level, and at the project level for continuing projects requesting new funding, i.e. ‘continuation’ projects;
- Leveraging funding from external (non-NVTA regional revenues) sources;
- Local priority;
- First fiscal year of expected drawdown;
- Year of opening; and
- Other relevant factors not included above.

For each of these factors, excluding other relevant factors, a rating of high, medium, low, or not applicable was determined.

It is noted that the Authority takes into account a **further qualitative consideration**, referred to as **geographic/modal balance**, when adopting each funding program. Geographic/modal balance is intended **to ensure that approved projects are not concentrated in one part of the region** to the exclusion of others and that approved projects reflect the Authority’s multimodal approach to project selection. The process for determining whether geographic/modal balance has been achieved is intuitive in nature, and it can only be applied towards the end of the project selection process.

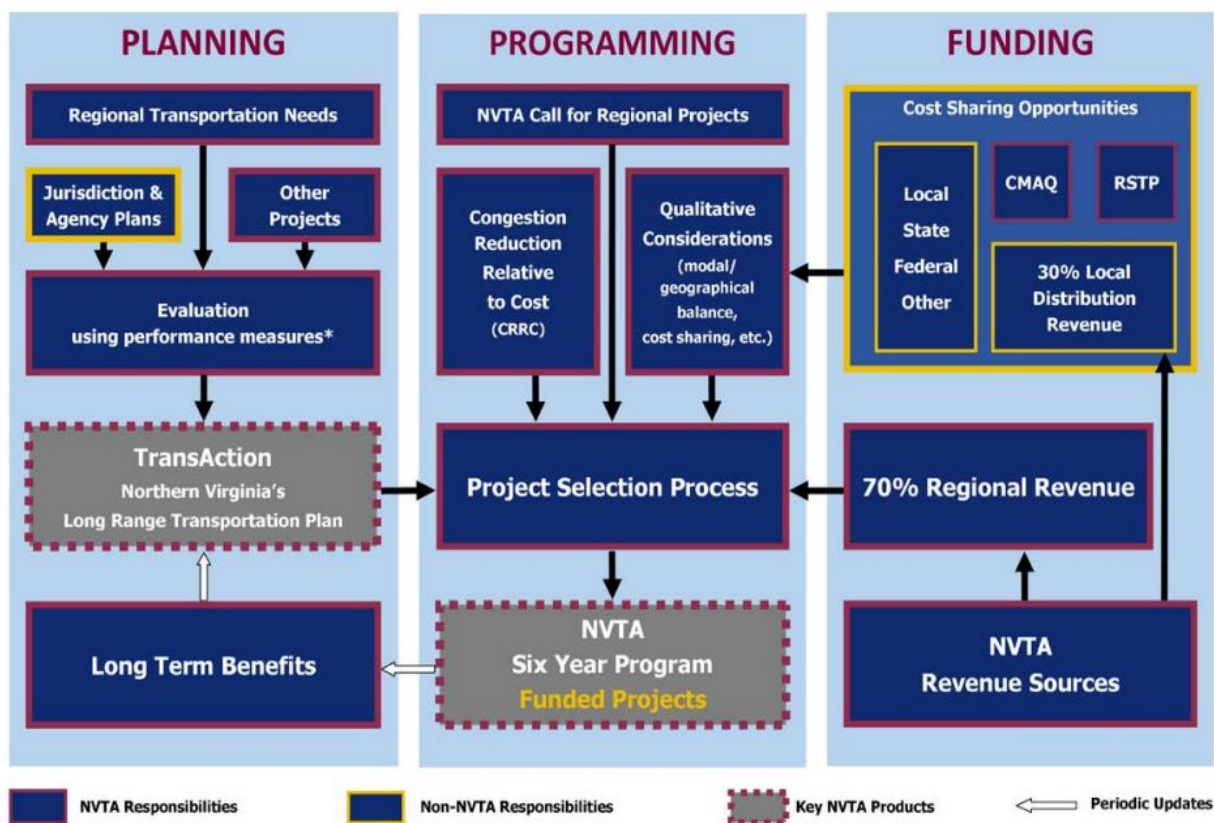

The quantitative and qualitative evaluations were combined and summarized into a single tabulation to simplify project comparisons. Projects were listed in order of their CRRC ratio (highest to lowest), reflecting the Virginia House Bill 2313 language that requires the Authority to **give priority to projects that achieve the greatest congestion reduction relative to cost**.

Just prior to the start of the public comment period, WMATA withdrew both of its project applications following the approval of the WMATA Funding Bill (HB 1539) by the Virginia General Assembly.

This action was determined not to necessitate revaluation of the [remaining 60 candidate projects](#), which were subsequently released for public comment on April 13, 2018. No project recommendations were made prior to or during the public comment period.

Following the **conclusion of the public comment period on May 20, 2018**, NVTA staff summarized public comments, the fifth component of NVTA's project selection process. **Nine projects received strong public support and none received strong opposition.** As with most other components of NVTA's project selection process, it is important to note that strong public support for, or opposition to, a project is not the sole basis for a project recommendation. However, it is important for Authority members to be aware of public sentiment as part of a holistic approach to project selection.

The Authority must complete **three critical steps to develop a Six Year Program**. 1) TransAction must be approved and updated. 2) Projects must be evaluated and selected. 3) Funding availability and budget appropriation action must be completed. The chart below shows the many interrelated sub-processes that go into completing these phases. See a Candidate Projects List with Congestion Reduction Relative to Cost Ranking on the next page.

Projects funded through the Six Year Program:

- Enhance quality of life and support economic growth
- Reduce congestion and increase capacity
- Improve travel time reliability and safety

Total recommended	44	\$ 1,285,273,281	100.00%

Documentation of Project Selection Recommendations

The project selection process followed a similar process to what was used for previous funding programs:

- NVTa staff considered all five components outlined above and developed project selection recommendations, taking into account estimated available funding. In some cases, NVTa staff project recommendations were less than the requested funding amount;
- NVTa staff recommendations were presented to the Authority's relevant committees listed below, each of which had the option to concur with, or modify, the NVTa staff recommendations:
 - Technical Advisory Committee (Statutory Committee)
 - Planning Coordination Advisory Committee (Statutory Committee)
 - Planning and Programming Committee (Standing Committee)

- Taking into account the NVTa staff recommendations and inputs from the Statutory Committees, the Planning and Programming Committee made a consolidated modified recommendation to the Authority;
- The Authority approved the Planning and Programming Committee’s recommendations and adopted the FY2018–2023 Six Year Program.

NVTa Staff Recommendations – 42 Projects

The starting point for developing NVTa staff recommendations was the list of 60 candidate projects mentioned above, ranked by their CRRC ratios. CRRC ratios played a pivotal role, as the Authority is effectively required to give priority to projects with the strongest performance on this scale. Starting at the top of this list and using an available regional revenue funding amount of \$1,285,273,281, the top 27 CRRC-ranked projects could be funded before the available funding was exhausted. However, NVTa staff did not recommend all of these projects, and recommended that other projects receive only a portion of the requested funding. As a result, NVTa staff recommendations included 42 projects.

With the following five exceptions, NVTa staff recommended that most of the top 40 ranked projects on the CRRC scale (in full or partially) be included in the FY2018–2023 SYP:

1. Route 28 Widening (Northbound from Route 50 to McLearen Road) – alternative funding source was identified (CRRC rank #4);
2. Route 29 Widening Project, Phase II (Union Mill Road to Buckley's Gate Drive) – alternative funding source was identified (CRRC rank #8);
3. Shirley Gate Road Extension: Braddock Road to Fairfax County Parkway – project dependent on substantial advancement of another recommended top 40 CRRC project (CRRC rank #26);
4. North Washington Street Multimodal Transportation Project – applicant (City of Falls Church) noted that this project is the City’s second priority project and requested that the Authority instead approve the City’s first priority project, in order to support urgently needed transportation infrastructure ahead of a major redevelopment in the City (CRRC rank #32);
5. City of Fairfax Bike Share Implementation – project advancement dependent on completion of ongoing study (CRRC rank #37).

In addition, NVTa staff recommended the following seven lower ranked projects, for the reasons stated:

1. Frontier Drive Extension and Intersection Improvements – continuation project (CRRC rank #42);
2. VRE Crystal City Station Improvements – continuation project (CRRC rank #43);
3. Evergreen Mills Road Intersection Realignments – Watson Road and Reservoir Road – project addresses a critical safety issue (CRRC rank #45);
4. West Falls Church & Joint Campus Revitalization District Multimodal Transportation Project – applicant (City of Falls Church) noted that this project is the City’s first priority project and requested that the Authority approve this project rather than the City’s higher ranked second priority project, in order to support urgently needed transportation infrastructure ahead of a major redevelopment in the City (CRRC rank #48);
5. ART Operations and Maintenance Facilities – geographic/modal balance (CRRC rank #56);
6. Interchange Improvements at Route 15 Leesburg Bypass and Edwards Ferry Road – continuation project (CRRC rank #57); and

7. Crystal City Metrorail Station East Entrance and Intermodal Connections – geographic/modal balance (CRRC rank #58).

Seven of the nine projects that received strong public support were included in the top 40 CRRC-ranked projects, and all nine of these projects were included in the 42 NVTA staff project recommendations.

NVTA Staff Recommendations – Nine Partially Funded Projects

NVTA staff recommended partial funding for nine of the 42 projects due to the following reasons:

- Rock Hill Road Bridge – project received initial funding allocations from Fairfax and Loudoun Counties; sufficient funding recommended to maintain project advancement;
- Northstar Boulevard - Shreveport Drive to Tall Cedars Parkway – project received a federal TIGER grant;
- Widen Route 1 (Fraleigh Blvd) to six lanes between Brady's Hill Rd and Dumfries Rd (RT234) – sufficient funding recommended to maintain project advancement;
- Falls Church Enhanced Regional Bike Routes (W&OD) – project received a regional grant;
- West End Transitway: Northern Segment (Phase 1) – sufficient funding recommended to maintain project advancement;
- Construct Route 28 Corridor Roadway Improvements – sufficient funding recommended to maintain project advancement;
- Frontier Drive Extension and Intersection Improvements – sufficient funding recommended to maintain project advancement;
- Interchange Improvements at Route 15 Leesburg Bypass and Edwards Ferry Road – sufficient funding recommended to maintain project advancement; and
- Crystal City Metrorail Station East Entrance and Intermodal Connections – sufficient funding recommended to maintain project advancement.

Planning and Programming Committee Recommendations – 44 Projects

Both of the Authority's Statutory Committees – the PCAC and the TAC – endorsed the NVTA staff recommendations. The Planning and Programming Committee also endorsed the NVTA staff recommendations, with funding adjustments to four projects, effectively increasing the number of recommended projects from 42 to 44. These funding adjustments were made within the limits of the available regional revenue funding amount of \$1,285,273,281. The four projects that the Committee recommended funding adjustments for are:

1. Jermantown Road Corridor Improvements Project (CRRC rank #6)
 - a. Reduce funding request from \$26,000,000 to \$21,000,000
 - b. Based on preliminary recommendations from the alternatives analysis that is currently underway, the cost for the recommended components will be closer to \$21M.
2. Construct Interchange at Prince William Parkway and Clover Hill Road (CRRC rank #13)
 - a. Reduce funding request from \$12,900,000 to \$1,900,000
 - b. Remaining funds are sufficient to fund the Design/Engineering/Environmental Phase (currently estimated at \$1,500,000) and the Right of Way Phase (currently estimated at \$200,000).

3. Summit School Rd Extension and Telegraph Rd Widening (CRRC rank #51)
 - a. Increase funding from zero to \$11,000,000
 - b. Covers the Design/Engineering/Environmental Phase (currently estimated at \$2,400,000) and the Right of Way Phase (currently estimated at \$7,200,000)
 - c. The project provides improved multimodal access to the Horner Road Commuter Lot (Largest commuter lot in Virginia, with direct access to the I-95 Express Lanes).
 - d. The project supports the increase in transit use as a result of the I-95/I-395 Express Lanes Project.
 - e. Telegraph Road currently provides direct access to the lot and the project encourages transit and carpool use by providing additional capacity to Telegraph Road.
 - f. The project facilitates additional express bus service use as PRTC/OmniRide plans to expand operations at this location.
4. Old Lee Highway Multimodal Improvements Phase 1 (CRRC rank #55)
 - a. Increase funding from zero to \$5,000,000
 - b. Covers the Preliminary Engineering, Right of Way and Construction Phases of the first phase of the project
 - c. Old Lee Highway provides an important pedestrian, bicycle, transit and vehicular connection between Fairfax County and the Vienna Metrorail station, George Mason University and the City of Fairfax.
 - d. The roadway is an important commuter thoroughfare, but is also home to a number of important local and regional destinations: three schools, a large park, a community center, historic site, commercial destinations and residential neighborhoods.
 - e. CUE bus and George Mason University shuttles operate routes along Old Lee Highway.

It is noted that the 44 projects recommended by the Planning and Programming Committee included 26 of the top 30 ranked projects on the TransAction Project Ratings (HB599) scale and 18 of the lower 30 ranked projects on this scale. The four projects in the top 30 ranked projects on the TransAction Project Ratings scale that were not recommended for funding were:

1. Route 28 Widening (Northbound from Route 50 to McLearen Road) – alternative funding source was identified (CRRC rank #4, TransAction rank #5);
2. Route 29 Widening Project, Phase II (Union Mill Road to Buckley's Gate Drive) – alternative funding source was identified (CRRC rank #8, TransAction rank #24);
3. Dulles Toll Road - Town Center Parkway Underpass (CRRC rank #47, TransAction rank #14); and
4. Construct Interchange at Route 234 and Sudley Manor Drive (CRRC rank #54, TransAction rank #19).

At its meeting on June 14, 2018, the Authority approved the Planning and Programming Committee's recommendations and adopted the FY2018--2023 Six Year Program.

“OUR FIRST SIX YEAR PROGRAM ADOPTION SIGNIFIES THE CULMINATION OF MANY YEARS OF HARD WORK AND DEDICATION TO SOLVING THE REGION’S TRANSPORTATION PROBLEMS.”

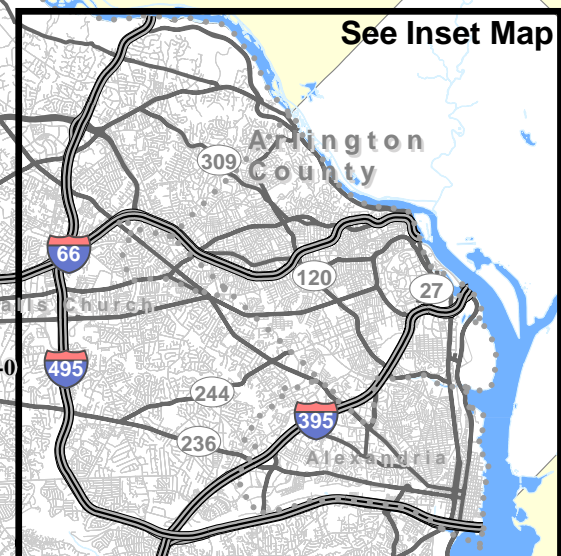

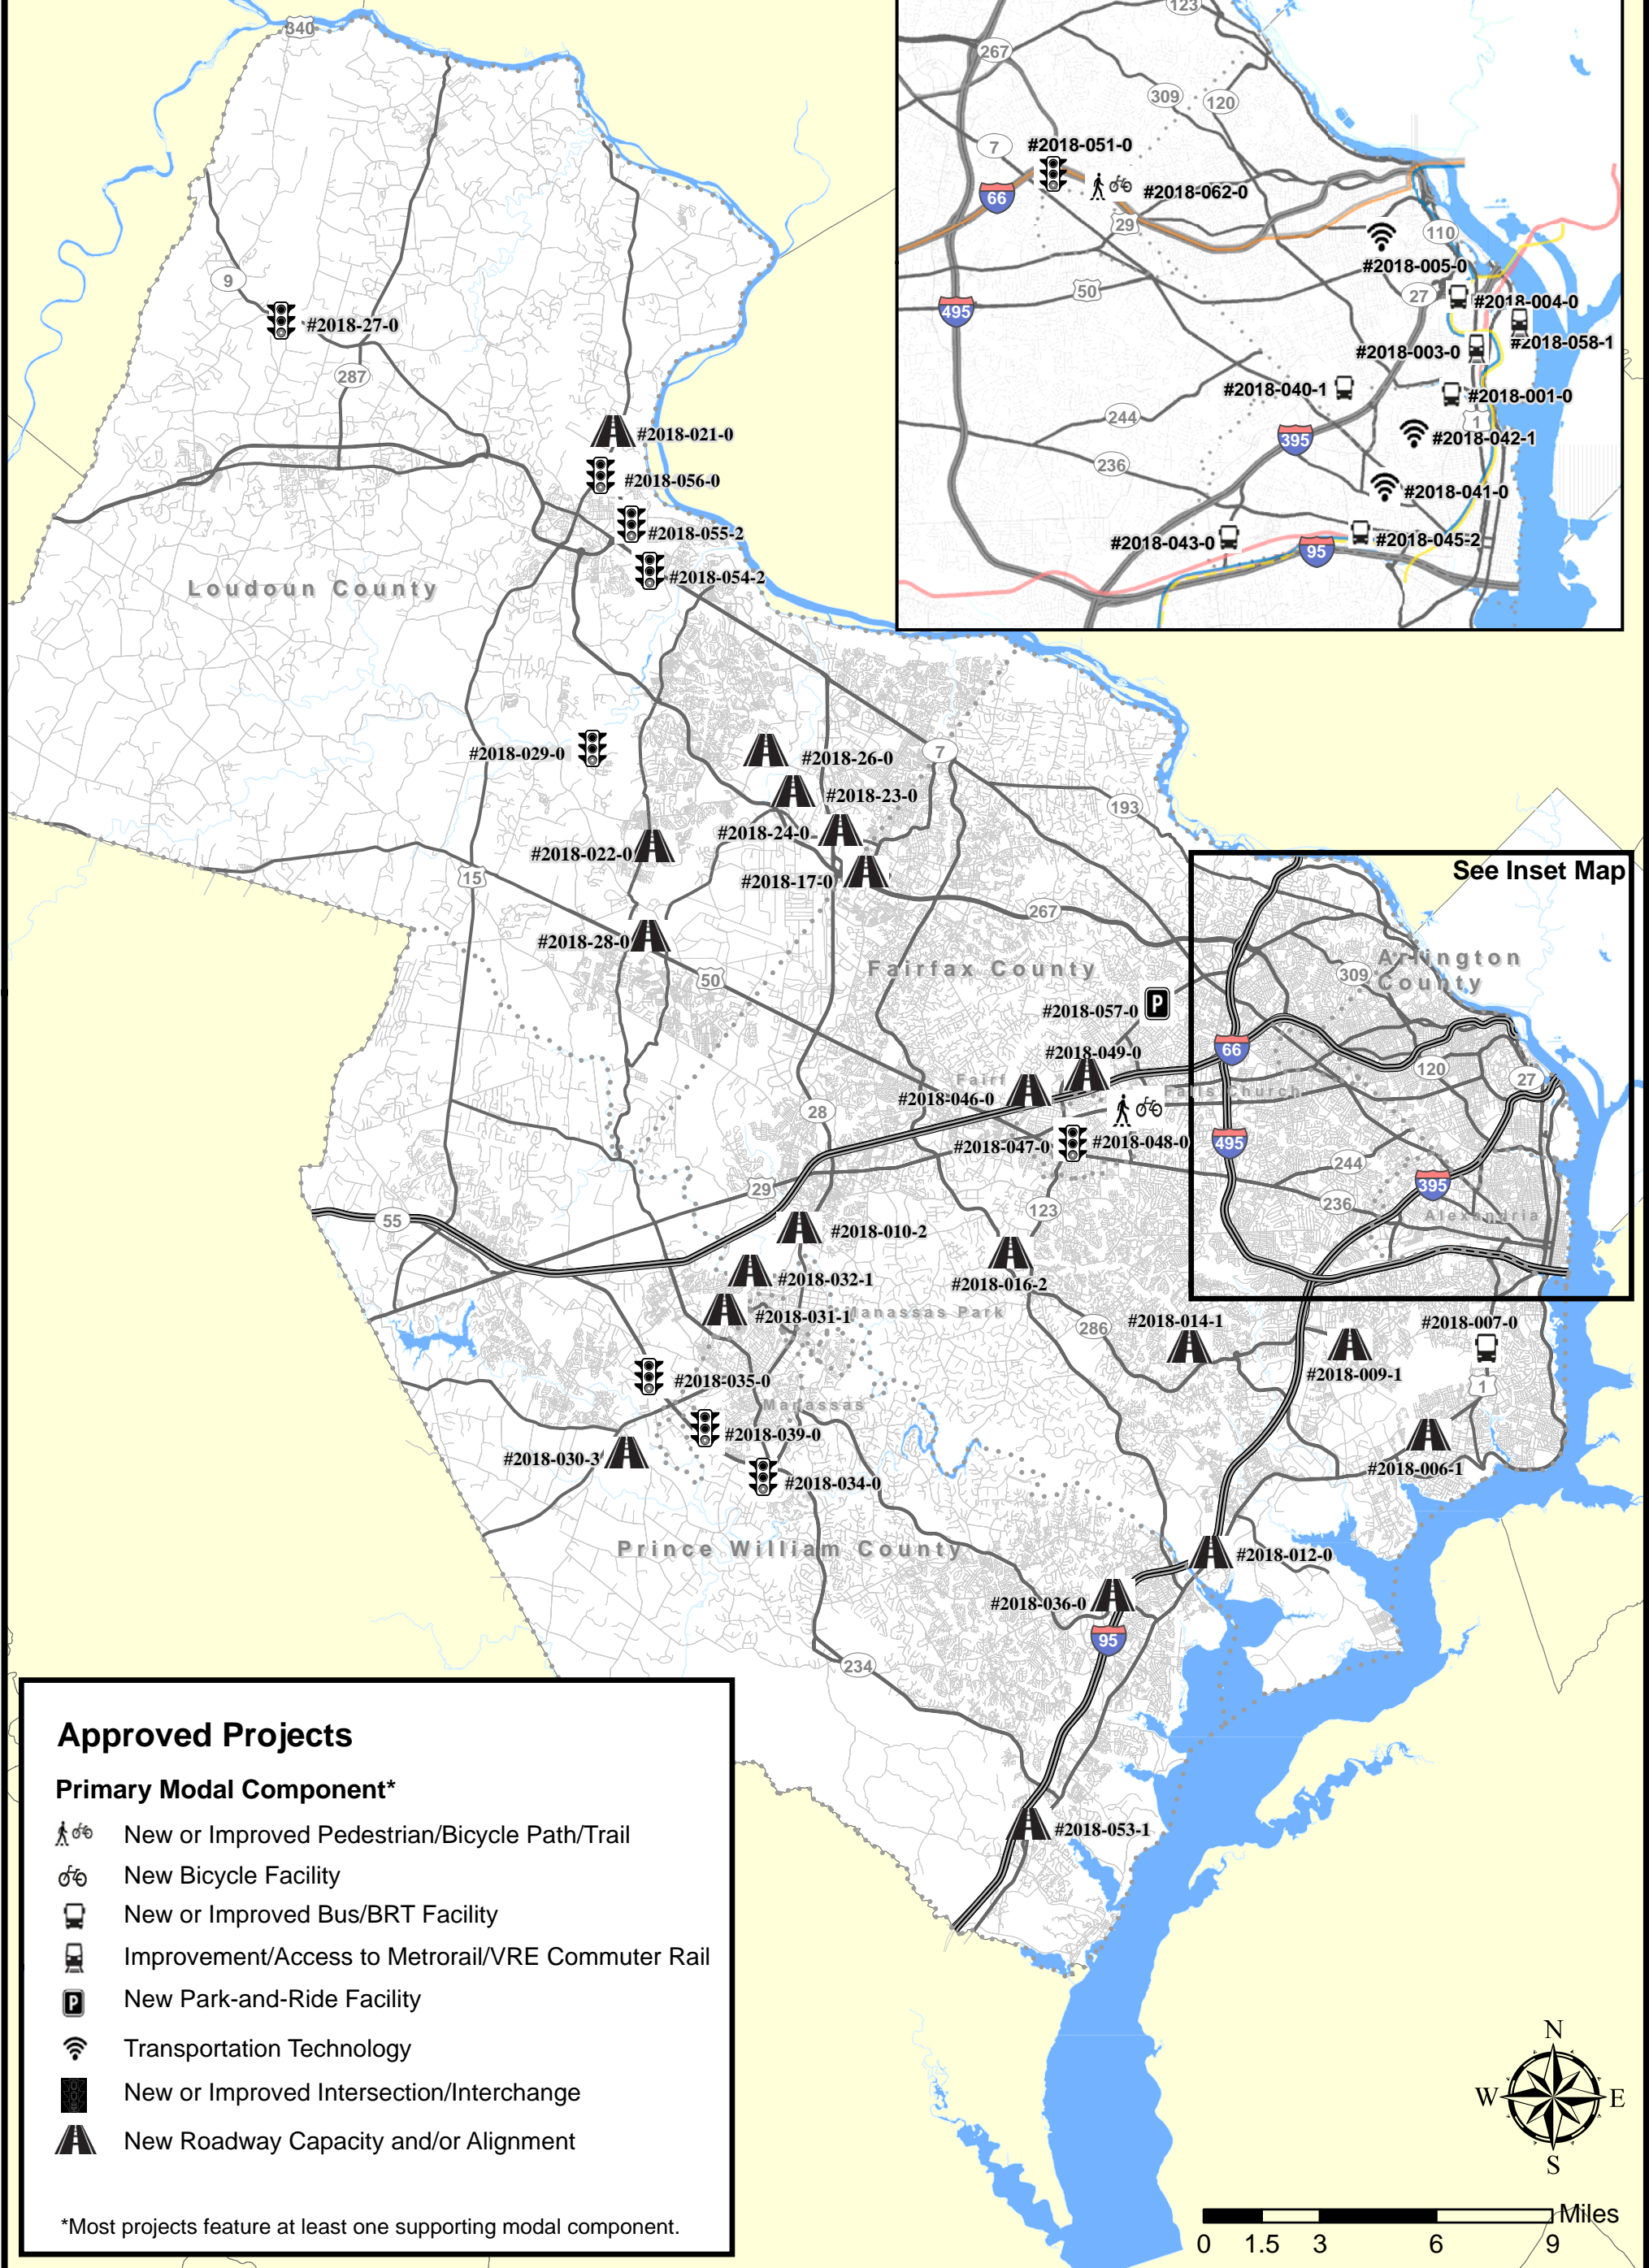

- **Marty Nohe, Chairman, Northern Virginia Transportation Authority**

Map of the Adopted Six Year Program

The following map and chart illustrate the FY2018–2023 Six Year Program categorized by mode of transportation, as well as a breakdown of each project and mode. The multimodal transportation projects total \$1.285 billion.

FY 2018-2023 Six Year Program

Adopted June 14, 2018

Approved Projects

Primary Modal Component*

- New or Improved Pedestrian/Bicycle Path/Trail
- New Bicycle Facility
- New or Improved Bus/BRT Facility
- Improvement/Access to Metrorail/VRE Commuter Rail
- New Park-and-Ride Facility
- Transportation Technology
- New or Improved Intersection/Interchange
- New Roadway Capacity and/or Alignment

*Most projects feature at least one supporting modal component.

0 1.5 3 6 9 Miles

VRE		VRE Crystal City Station Improvements
NOVA Parks		Falls Church Enhanced Regional Bike Routes (W&OD)

IV. FUNDING STRATEGY

Funding Narrative: Fiscal Planning

The Northern Virginia Transportation Authority's Finance Committee initiated development of a funding strategy for the Authority's inaugural FY2018–2023 Six Year Program in May of 2017. Over the course of 13 months, the Finance Committee received reports and analyses and provided feedback on numerous matters critical to determining the level of PayGo funding available for the SYP. These included:

- Regional Revenue Projections
- Investment Portfolio Interest Earnings
- Debt Service Commitments
- Future Technical Support Expenses for TransAction Updates, Long Term Benefits and Congestion Reduction Relative to Cost Analyses
- Out Year Taper
- Cash Flow (Liquidity) Analysis
- Appropriation Schedule Options
- Fiscal Impact Analysis of the 2018 General Assembly Action

On June 6, 2018, the Finance Committee made a \$1.285 billion PayGo funding recommendation to the Planning and Programming Committee for the SYP. On June 14, 2018 the NVTA adopted its inaugural SYP of 44 projects totaling \$1.285 billion. Over the summer of 2018, NVTA staff worked with individual jurisdictions and agencies in the development of the schedule of appropriations presented in the Table on pages 29 - 31.

While the SYP is designated as covering fiscal years 2018 through 2023, appropriations start in FY2019. The FY2019 start of appropriations is based on the SYP adoption in June 2018. Since the fiscal year ends on June 30th, there was no opportunity to make FY2018 appropriations before the end of the fiscal year. All of FY2018 revenue was carried forward into FY2019.

A significant feature of the SYP funding strategy developed by the Finance Committee is to appropriate the approved funding amount in the first fiscal year the project is projected to expend NVTAFunds. This funding strategy for appropriations was put in place even though most projects will require more than one year to complete. The full appropriation in the first fiscal year strategy is consistent with NVTAFunding Strategic Plan Goal IV; ‘Cementing NVTAFunding’s reputation as a predictable long-term funding partner.’ Other beneficial features of this strategy are:

- An accepted best financial practice, noted for being:
 - Conservative
 - Transparent
 - Accountable
 - Reliable
- Supports jurisdiction and agency efforts when applying for matching/additional funds;
- Protects jurisdictions and agencies from outside appropriation risks;
- Helps ensure started projects are completed;
- Consistent with many jurisdiction practices; and
- Understood by project sponsors, transportation industry and the financial community.

Financing Cost Savings

The Authority’s Finance Committee invested significant time in the development of the **funding strategy for the Six Year Program. This funding strategy avoids the use of outside financing**, and instead, relies on the Authority’s strong balance sheet to advance projects. The Finance Committee funding **strategy permitted the commitment of \$1.285 billion** mostly appropriated in the early years (FY2019 and FY2020) of the SYP **to get projects moving quickly** while also **saving \$194 million** that can be **programmed into future regional transportation projects** instead of interest payments to bondholders.

Appropriated Projects FY2018–2023

While the FY2018–2023 Six Year Program covers a six-year timespan, the Authority is expected to update the program every two years. The table on the following page lists appropriations for each of the SYP projects.

NVTA FY2018 to FY2023 Six Year Program	Jurisdiction	Project	FY2019	FY2020	FY2021	FY2022	FY2023
SPA Number	Jurisdiction / Agency	Project	FY2019	FY2020	FY2021	FY2022	FY2023
2018-005-1	Arlington County	Intelligent Transportation System Improvements	10,000,000				
2018-004-1	Arlington County	Pentagon City Multimodal Connections and Transitway Extension		28,850,000			
2018-001-1	Arlington County	ART Operations and Maintenance Facilities	39,027,000				
2018-003-1	Arlington County	Crystal City Metrorail Station East Entrance & Intermodal connections			5,000,000		
2018-041-1	City of Alexandria	Alexandria ITS Projects		1,195,491			
2018-042-1	City of Alexandria	Alexandria Bus Network ITS	150,000				
2018-043-1	City of Alexandria	DASH Transit Service Enhancements and Expansion			11,933,161		
2018-040-2	City of Alexandria	West End Transitway: Northern Segment (Phase 1)			2,200,000		
2018-045-1	City of Alexandria	Alexandria Duke St Transitway		12,000,000			
2018-046-1	City of Fairfax	Jermantown Road Corridor Improvements Project	21,000,000				
2018-049-1	City of Fairfax	Roadway Network Northfax West	2,500,000				
2018-047-1	City of Fairfax	Intersection Improvements at Eaton Place/Chain Bridge Road				10,750,000	
2018-048-1	City of Fairfax	Old Lee Highway Multimodal Improvements Phase 1		5,000,000			
2018-051-1	City of Falls Church	West Falls Church & Joint Campus Revitalization District Multimodal Transportation Project			15,700,000		
2018-017-1	Fairfax County	Rock Hill Road Bridge		20,604,670			
2018-014-2	Fairfax County	Rolling Road Widening: Hunter Village Drive to Old Keene Mill Road		11,111,000			
2018-010-3	Fairfax County	Route 28 Widening: Route 29 to Prince William County Line			16,000,000		
2018-016-3	Fairfax County	Fairfax County Pkwy Widen from Ox Rd to Lee Hwy w/ separated interchange at Popes Head Rd		67,000,000			
2018-007-1	Fairfax County	Richmond Highway Bus Rapid Transit - Phases I & II	250,000,000				

NVTA FY2018 to FY2023 Six Year Program	Jurisdiction	Project	FY2019	FY2020	FY2021	FY2022	FY2023
2018-006-2	Fairfax County	Route 1 Widening (Mount Vernon Memorial Highway to Napper Road)		127,000,000			
2018-012-1	Fairfax County	Richmond Highway (Route 1)/CSX Underpass Widening				12,000,000	
2018-009-2	Fairfax County	Frontier Drive Extension and Intersection Improvements#		25,000,000			
2018-024-1	Loudoun County	Route 28 Northbound Widening –between the Dulles Toll Road and Sterling Boulevard	20,000,000				
2018-021-1	Loudoun County	Route 15 Bypass Widening: Battlefield Parkway to Montresor Road			54,000,000		
2018-023-1	Loudoun County	Extend Shellhorn Road: Loudoun County Parkway (Route 607) to Randolph Drive (Route 1072)		16,000,000			
2018-022-1	Loudoun County	Northstar Boulevard - Shreveport Drive to Tall Cedars Parkway		64,805,000			
2018-026-1	Loudoun County	Prentice Drive Extension: Lockridge Road (Route 789) to Shellhorn Road (Route 643)		76,230,000			
2018-028-1	Loudoun County	Dulles West Boulevard Widening: Loudoun County Parkway to Northstar Boulevard	47,800,000				
2018-027-1	Loudoun County	Route 9 Traffic Calming	12,112,000				
2018-029-1	Loudoun County	Evergreen Mills Road Intersection Realignments – Watson Road and Reservoir Road	14,000,000				
2018-062-1	City of Falls Church/NVRPA	Falls Church Enhanced Regional Bike Routes (W&OD)	3,244,959				
2018-030-4	Prince William County	RT28 corridor improvements (Fitzwater Dr to Pennsylvania Ave)	15,000,000				
2018-039-1	Prince William County	Construct Interchange at Prince William Parkway and Clover Hill Road					1,900,000
2018-035-1	Prince William County	Construct Interchange at Prince William Parkway and University Boulevard	24,200,000				
2018-032-2	Prince William County	Route 28 Corridor Feasibility Study - EIS (City of Manassas to Fairfax County)		3,500,000			
2018-032-3	Prince William County	Construct Route 28 Corridor Roadway Improvements			89,000,000		
2018-034-1	Prince William County	Construct Interchange at Route 234 and Brentsville Road	54,900,000				

NVTA FY2018 to FY2023 Six Year Program	Jurisdiction	Project	FY2019	FY2020	FY2021	FY2022	FY2023
2018-036-1	Prince William County	Summit School Rd Extension and Telegraph Rd Widening	11,000,000				
2018-053-2	Town of Dumfries	Widen Route 1 (Fraley Blvd) to six lanes between Brady's Hill Rd and Dumfries Rd (RT234)		44,860,000			
2018-054-3	Town of Leesburg	Construct Interchange at Route 7 and Battlefield Parkway		25,000,000			
2018-056-1	Town of Leesburg	Construct Interchange at Route 15 Bypass and Battlefield Parkway			2,000,000		
2018-055-3	Town of Leesburg	Interchange Improvements at Route 15 Leesburg Bypass and Edwards Ferry Road		5,400,000			
2018-057-1	Town of Vienna	Mill St NE Parking Garage	2,300,000				
2018-058-2	VRE	VRE Crystal City Station Improvements		4,000,000			
		Total By Fiscal Year	\$ 527,233,959	\$ 537,556,161	\$ 195,833,161	\$ 22,750,000	\$ 1,900,000
		Cumulative Total by Fiscal Year	\$ 527,233,959	\$ 1,064,790,120	\$ 1,260,623,281	\$ 1,283,373,281	\$ 1,285,273,281

Repealed Funds from the FY2018–2023 Six Year Program

Pursuant to Virginia House Bill 1539 adopted in 2018 by the General Assembly, the Grantor's and Transient Occupancy Taxes provided previously through HB2313 (2013) are no longer available to the Authority. Effective with FY2019 (start date July 1, 2018), those taxes are re-imposed within the Member Localities, but directed to fund the capital needs of WMATA and other transportation purposes in the case of Member Localities who are not members of WMATA.

When the Authority issued the Call for Regional Transportation Projects, or CfRTP, for the Six Year Program in October 2017, the three revenue sources provided via HB 2313 generated approximately \$335 million annually. However, the repeal of the two revenue streams resulted in the net loss of \$289 million, over the life of the Authority's FY2018–2023 Six Year Program. When development of the SYP was initiated, it was anticipated NVTa would have approximately \$1.5 billion to program for the life of the plan, but the loss of two revenue streams meant the need to revise estimates to reflect the reduction of revenues. Ultimately, having reduced revenues means that some projects may be delayed and take longer to complete than originally scoped, and other projects may not be funded at all. Although funding sources have decreased, the region's transportation needs have not.

Projects selected for funding may have additional funding sources, however, including the NVTAs Local Distribution Funds (allocated at the sole discretion of the sponsoring jurisdiction). Other non-NVTA funding sources include Federal (i.e. CMAQ/RSTP allocations), State (subject to prioritization using the ‘SMART SCALE’ process), local jurisdiction and transit agency funds.

Regional Revenue Funds can be used directly to fund projects (PayGo) or to finance bonds that have been issued specifically to fund projects included in future updates to the Six Year Program.

V. LOOKING AHEAD

Subsequent Six Year Program Updates

Through the **SYP update** process, it is envisioned the **Authority will allocate an estimated \$400 million** (preliminary and subject to change) in regional revenues every two years, starting in June 2020, for program years 2024 and 2025. This does not include the Authority’s debt capacity, which could increase the funding available in appropriate circumstances. Use of debt capacity will be most prudently considered when the rates of project expenditure exceed the rate of revenue receipt.

It is anticipated that the demand for regional revenues in future SYP update cycles will be intense, as new projects are evaluated alongside continuation projects that have advanced through engineering and design phases to the more expensive right-of-way acquisition and construction phases. However, the Authority’s funding **allocation decisions** are expected to continue to **take into account modal and geographic balance**. The Authority will continue to give priority to projects that achieve the greatest congestion reduction relative to cost.

During the October 11, 2018 Authority Meeting, the Authority **took budget action to appropriate \$527.2 million for the first 16 of the 44 projects** approved in the FY2018–2023 Six Year Program. The remaining 28 projects of the nearly \$1.3 billion Six Year Program will receive funding appropriations during the Authority’s future annual budgets.

Six Year Program Key Update Schedule:

1. July 2019: Call for Regional Transportation Projects
2. September 2019: Project application deadline
3. November 2019: Resolution deadline
4. February 2020: Commence PCAC/TAC/PPC reviews
5. March 2020: Release draft FY2020-2025 Six Year Program
6. April 2020: Open House and Public Hearing
7. June 2020: Six Year Program adoption

**Dates subject to Authority approval*

Continuation Projects

One-third of SYP funding (\$435 million) was allocated to projects that have previously been allocated regional revenues by the Authority. In total, 13 of the 44 approved projects in the SYP are ‘continuation’ projects. Demand for regional revenues is expected to become increasingly intense.

13 Continuation Projects in the SYP:

1. Fairfax County: Route 1 Widening (Mount Vernon Memorial Highway to Napper Road)
 2. Fairfax County: Frontier Drive Extension and Intersection Improvements
 3. Fairfax County: Route 28 Widening: Route 29 to Prince William County Line
 4. Fairfax County: Rolling Road Widening: Hunter Village Drive to Old Keene Mill Road
 5. Fairfax County: Fairfax County Parkway Widening from Ox Road to Lee Highway includes a grade separated interchange at the intersection of Popes Head Road
 6. Prince William County: Route 28 corridor improvements (Fitzwater Dr to Pennsylvania Ave)
 7. Prince William County: Route 28 Corridor Feasibility Study – Environmental Impact Statement (City of Manassas to Fairfax County)
 8. Prince William County: Construct Route 28 Corridor Roadway Improvements
 9. City of Alexandria: West End Transitway: Northern Segment – Phase 1
 10. Town of Dumfries: Widen Route 1 (Fralely Blvd) to six lanes between Brady’s Hill Rd and Dumfries Rd (Route 234)
 11. Town of Leesburg: Construct Interchange at Route 7 and Battlefield Parkway
 12. Town of Leesburg: Interchange Improvements at Route 15 Leesburg Bypass and Edwards Ferry Road
 13. VRE: VRE Crystal City Station Improvements
-

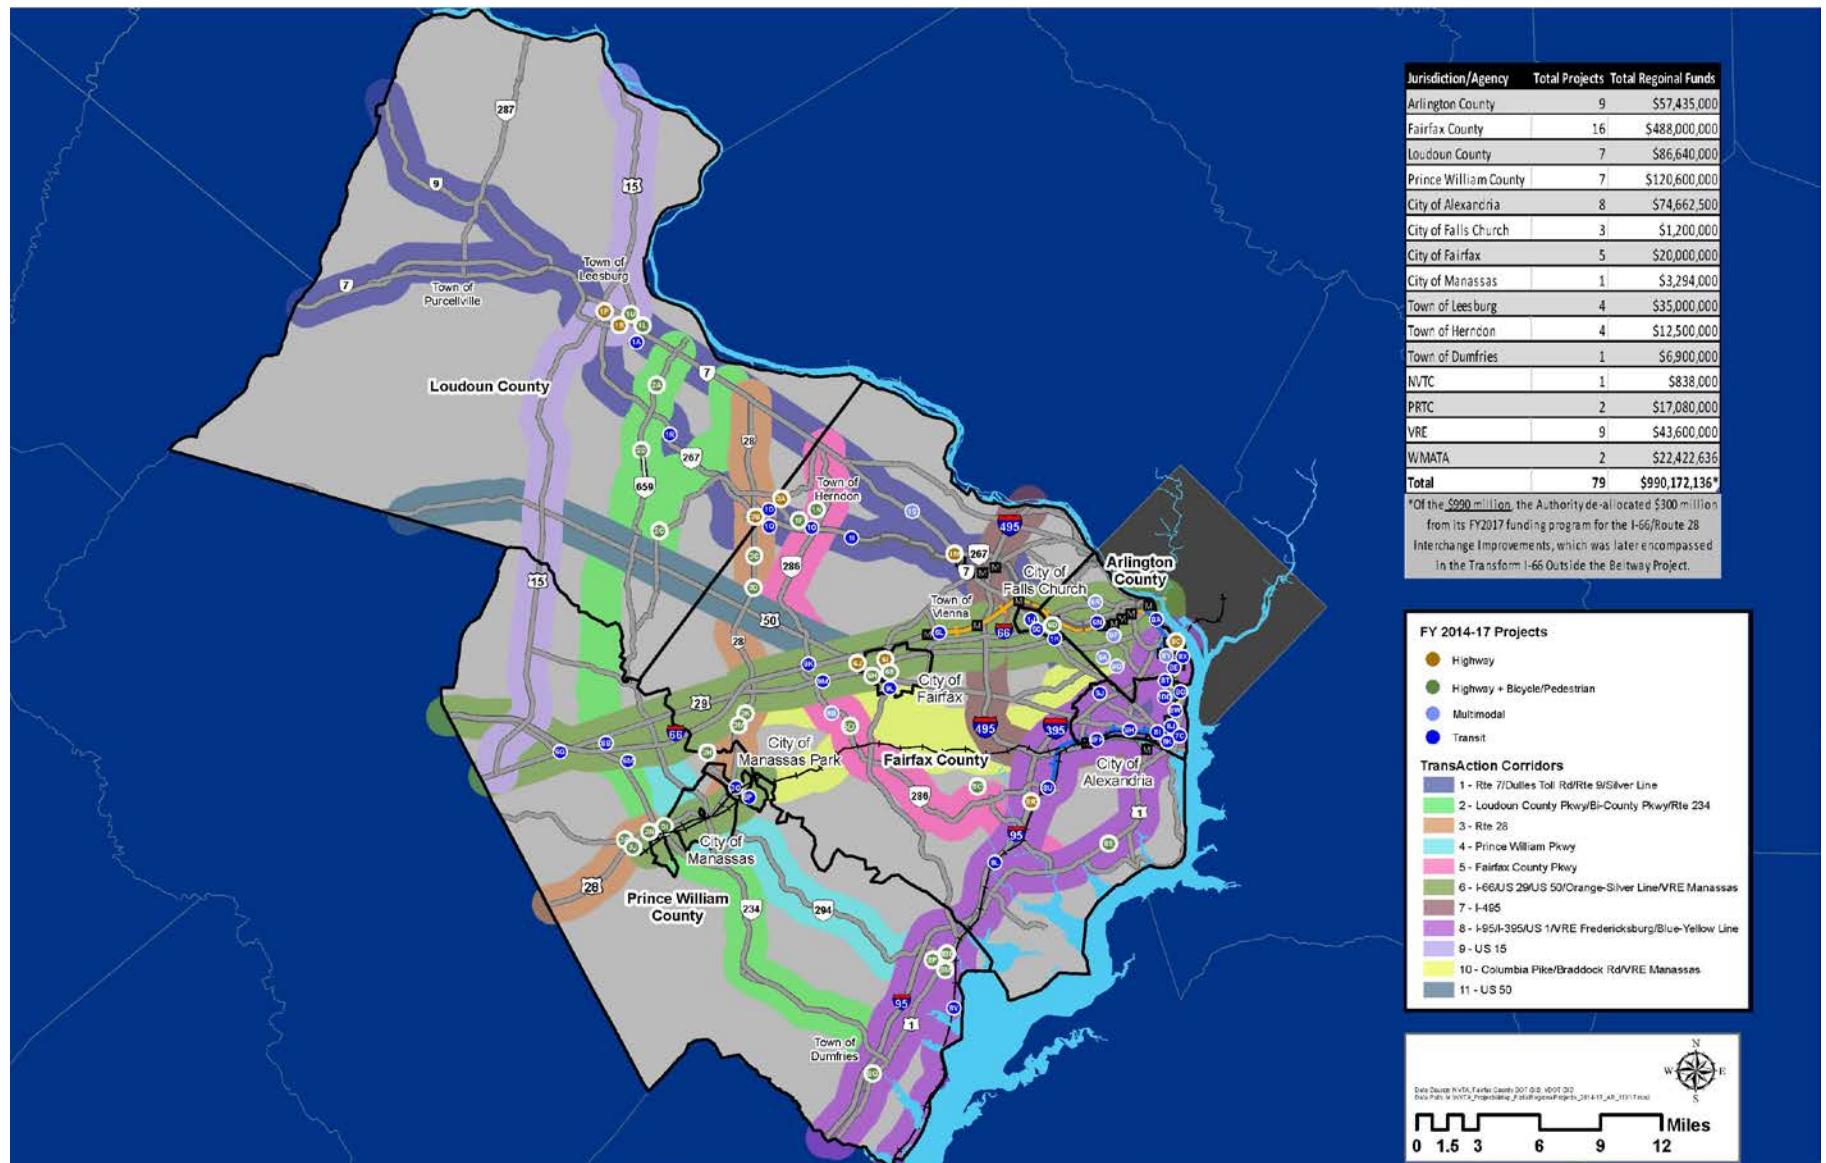

APPENDIX A. PREVIOUS FUNDING PROGRAMS

Following project approval, the NVTa executes Standard Project Agreements (SPAs) with jurisdictions and agencies for each approved project. Individual projects may have multiple SPAs from successive NVTa program cycles related to different phases of the project (continuation projects). With the adoption of the SYP, **the Authority is advancing 122 SPAs for 95 discrete projects, totaling more than \$1.975 billion in regional multimodal investments** for Northern Virginia. Future funding programs (every two years) will result in additional SPAs for current and new projects. Even when projects are completed and SPAs are closed, the NVTa retains a fiduciary responsibility to protect the Authority’s investment. Please reference **Appendix A** for a list of NVTa-funded projects, including continuation projects, prior to the adoption of the FY2018–2023 Six Year Program.

APPENDIX B. FY2018–2023 SIX YEAR PROGRAM PROJECT DESCRIPTION FORMS

Please reference **Appendix B** to review the 44 FY2018–2023 Six Year Program Project Description Forms with detailed information on each individual project.

APPENDIX A: FY2014-2017 FUNDING PROGRAMS

FY2014-2017 PROJECT LIST

Jurisdiction/Agency	Project Title	NVTA Funding	Project Cost	NVTA Funding Programs	Phase Funded
Arlington	Silver/Blue Line Mitigation (Four New Buses)	\$1,000,000	\$1,000,000	FY 2014	Bus Purchase
Arlington	Boundary Channel Drive Interchange	\$4,335,000	\$9,335,000	FY 2014	Design/Con
Arlington	Crystal City Multimodal Center	\$1,500,000	\$1,500,000	FY 2014	Con
Arlington	Columbia Pike Multimodal Street Improvements	\$12,000,000	\$12,000,000	FY 2014	Con
Arlington	Ballston Metrorail Station West Entrance	\$12,000,000	\$90,000,000	FY 2015-16	Final Design
Arlington	Glebe Road Corridor Intelligent Transportation System Improvements	\$2,000,000	\$2,000,000	FY 2015-16	Preliminary Eng., Con
Arlington	Columbia Pike Multimodal Street Improvements	\$10,000,000	\$82,500,000	FY 2015-16	Des, Con
Arlington	Lee Highway Corridor Intelligent Transportation System Enhancements	\$3,000,000	\$3,000,000	FY 2017	Des, Eng, ROW, Con
Arlington	Crystal City Streets: 12th Street Transitway, Clark/Bell Realignment & Intersection Improvements	\$11,600,000	\$11,600,000	FY 2017	Des, Eng, Env, Con

*The Authority de-allocated \$300 million from its FY2017 funding program for the I-66/Route28 Interchange Improvements, which were encompassed in the Transform I-66 Outside the Beltway Project.

**These projects were withdrawn by the agency that applied for project funding.

APPENDIX B: PROJECT DESCRIPTION FORMS

West End Transitway: Northern Segment (Phase 1)

Project Description

The West End Transitway will provide high capacity Bus Rapid Transit (BRT) between the Pentagon in Arlington County and the Landmark Mall in Alexandria, connecting major employment centers, residential neighborhoods, and transit hubs. Capital investments include: rolling stock, construction of stations with amenities (real time bus, shelter, seating, lighting, etc.), installation of Transit Signal Priority (TSP), upgrades to existing traffic signals, dedicated bus lanes and queue jump lanes, and acquisition of right of way (ROW) needed for construction. Once constructed, the plan is to operate two services – Local and Express. Under Phase 1, the Local service will operate between Landmark Mall and the Pentagon, serving the Beauregard and Van Dorn corridors, the Mark Center, Southern Towers, and Shirlington Bus Station in Arlington where the service will access I-395 to the Pentagon. The Express service will operate from Landmark Mall, serving the Van Dorn corridor, a portion of the Beauregard corridor, and the Mark Center where the service will access I-395 at Seminary Road to the Pentagon.

The funds requested in this application are for the first phase of the West End Transitway. The Northern Segment meets the Federal Transit Administration's (FTA) definition of minimal operable segment and will provide transit service not dependent on the Southern Segment (Landmark Mall to Van Dorn Metrorail station). The City of Alexandria intends to pursue implementation of the Southern Segment in later years beyond the timeframe of this SYP. In addition to funds for ROW, Construction, and Capital Asset Acquisition, the City is requesting funds in FY18-FY20 to hire a project manager to coordinate (within City departments and with funding, partner, and public stakeholders) the Design and Construction of the Transitway. This would be a capitalized position within the City's annual budget, specifically for the West End Transitway, and a specific charging code would be set up within the City's financial system so that all staff costs/charges would be toward the West End Transitway project.

TOTAL:	\$60,750,000	\$2,200,000	\$12,401,000	\$128,151,000

Note: There is a funding gap of \$111,150,000.

Project Analysis Highlights

Congestion Reduction Relative to Cost Ratio (Total Cost in \$1000's):	23.73
Congestion Reduction Relative to Cost Ratio Rank (Total Cost in \$1000's):	25
TransAction Project Rating:	68.16
TransAction Project Rating Rank:	27

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Improve connectivity and increase access for residents, visitors and employees to major transit and employment centers
- Improve travel time reliability for transit users
- Improve the safety of the transportation network
- Reduce transportation related emissions

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Alexandria ITS Projects

Intelligent Transportation System Improvements

Project Description

The City of Alexandria's ITS projects will install a transit vehicle signal priority system on King Street between Dawes Avenue and Quaker Lane; and enhance the transit vehicle signal priority system on Duke Street between Walker Street and Telegraph Road.

The following King Street traffic signals will be impacted by this project: Dawes Avenue, Chesterfield Road, Beauregard Street, S. 28th Street, North Hampton Drive, Park Center Drive, Menokin Drive, N. Dearing Street, S. Taylor Street, and N. Quaker Lane.

The Following Duke Street traffic signals will be impacted by this project: S. Walker Street, N. Paxton Street, S. Pickett Street, N. Pickett Street, Fox Chase Shopping Center, Jordan Street, S. Quaker Lane, Alexandria Commons Shopping Center, Sweeley Street, and Roth Street.

Congestion Reduction Relative to Cost Ratio Rank (Total Cost in \$1000's):	1
TransAction Project Rating:	65.00
TransAction Project Rating Rank:	49

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Reduce congestion through improved transit operations
- Increase people moving capacity of the existing roadways
- Improve regional connectivity

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Alexandria Bus Network ITS

Intelligent Transportation System Improvements

Project Description

DASH is seeking to upgrade its real-time passenger info capabilities by implementing Real-Time General Transit Feed Specification (GTFS), developing a Real-Time SMS text system, and installing additional real-time signage along several of its busiest transit corridors.

With Real-Time GTFS, DASH would be able to provide real-time trip planning information, based on actual vehicle locations instead of scheduled arrival times. DASH would be able to integrate its real-time data feed with partner agency platforms (i.e. WMATA's BusETA) and third-party applications such as Google Transit. The second item, Real-Time SMS, would allow passengers to get stop-specific real-time bus arrival information via text message. This is particularly helpful for passengers with non-smartphones, or those with tactile-related disabilities. Lastly, the additional real-time signage units would improve passenger information and convenience, particularly along busier routes and at major trip generators. Roughly 20 solar-powered units would be mounted on stop poles along major transit corridors such as King Street (Route 7), Duke Street, Beauregard Street, and Van Dorn Street.

Project Analysis Highlights

Congestion Reduction Relative to Cost Ratio (Total Cost in \$1000's):	5144.53
Congestion Reduction Relative to Cost Ratio Rank (Total Cost in \$1000's):	2
TransAction Project Rating:	64.62
TransAction Project Rating Rank:	51

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Provide real-time information system
- Reduce congestion by making transit more convenient and attractive for existing and potential riders

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

DASH Transit Service Enhancements and Expansion

Project Description

The DASH Transit Service Enhancements and Expansion project will install infrastructure for electric buses in its planned facility expansion in an effort to accelerate the planned transition of the DASH fleet from hybrid and clean diesel buses to fully-electric vehicles and purchase eight fully electric buses. The electric buses would be used to provide new service in high-development areas such as Eisenhower Avenue and Potomac Yard, both existing and planned high development areas with large number of jobs and residents. These additional buses will also increase the reliability of existing services.

SPA Number: 2018-043-1

TransAction ID: 85

Submitting Jurisdiction/Agency: City of Alexandria

Location: Dash facility located at 3000 Business Center Drive, Alexandria, VA

Requested NVTA Funds: \$11,933,161

NVTA Funds Received: \$11,933,161

Total Cost to Complete Project: \$23,068,161
(Segment)

DASH has previously been awarded \$11.1 million in SmartScale funds to expand its existing garage facility to accommodate 45 additional buses, and to purchase six (6) clean diesel-propulsion expansion vehicles. DASH is now seeking to leverage those funds to secure an additional \$11.1 million to install electric infrastructure in the new part of the planned facility, and purchase eight (8) fully-electric expansion buses.

Congestion Reduction Relative to Cost Ratio Rank (Total Cost in \$1000's):	20
TransAction Project Rating:	66.53
TransAction Project Rating Rank:	39

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Reduce congestion by allowing DASH to provide new/improved transit service
- Reduce environmental impacts
- Improve connectivity in and around Eisenhower Avenue and Potomac Yard

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Alexandria Duke Street Transitway

Project Description

The Alexandria Duke Street Transitway will provide dedicated, curbside transit lanes on Duke Street for Bus Rapid Transit, between Diagonal Road (King Street Metro) and Walker Street (Landmark Mall). The conceptual design for the ultimate configuration, developed as part of the Transitway Corridors Feasibility Study (adopted by City Council in 2012), recommended that the existing curb lanes along most portions of Duke Street will be converted to a transit and business access lane.

In the section of Duke Street between Jordan Street and Wheeler Avenue, where there are currently four lanes, the street will be widened to provide a reversible center lane for general purpose traffic. The reversible lane would be configured to allow Duke Street to accommodate a dedicated transit lane in the peak hour and peak direction of traffic flow during the a.m. and p.m. peak periods along Duke Street. The project will include streetscape enhancements, transit stations, transit signal priority, a bicycle facility along Duke Street along with corridor-wide pedestrian improvements. Previous NVTA funding for FY 2014 (\$60,000), FY 2015 / 2016 (\$190,000) was used for the installation of Transit Signal Priority (TSP) along the Duke Street corridor to initiate improved transit reliability, the first step toward the development of a Bus Rapid Transit facility.

The funding request for FY21, FY22 and FY23 will be used toward a Full Time Employee (FTE) position within the City to provide overall project management, and to begin the environmental and design work toward the Transitway project. This would be a capitalized position within the City's annual budget, specifically for the Duke Street Transitway, and a specific charging code would be set up within the City's financial system so that all staff costs / charges would be toward the Duke Street Transitway project.

Project Funding

	Requested NVTA Funds	NVTA Funds Received	Other Funding Sources	Total Cost by Phase
Design, Engineering, Environmental Work	\$12,000,000	\$12,000,000	\$250,000 (NVTA 70% Funds)	\$12,250,000
Right of Way Acquisition				\$12,600,000
Construction				\$79,200,000
Capital Asset Acquisitions				\$11,000,000
TOTAL:	\$12,000,000	\$12,000,000	\$250,000	\$115,050,000

Note: There is a funding gap of \$102,800,000.

Project Analysis Highlights

Congestion Reduction Relative to Cost Ratio (Total Cost in \$1000's):	17.07
Congestion Reduction Relative to Cost Ratio Rank (Total Cost in \$1000's):	31
TransAction Project Rating:	71.33
TransAction Project Rating Rank:	15

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Improve pedestrian facilities
- Enhance safety
- Improve travel time reliability
- Increase access to jobs, employers, and destinations
- Improve connections within areas of concentrated growth

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

ART Operations and Maintenance Facilities

Project Description

This project will fulfill the Arlington Transit (ART) facilities needs anticipated in the 2016 Transit Development Plan (TDP). Due to the service expansion identified in the TDP that will add 2.2 million riders to the ART system by 2026, as well as the lack of suitably-sized properties in Arlington County, the County is currently pursuing an approach to implementation that will require two facilities located on two sites to meet the increased capacity of ART. This funding request includes two discrete ART facility projects, both of which are currently in the process of site acquisition and conceptual analysis of facility siting. The main property is located on Shirlington Road in Arlington County. At this time, it is anticipated that this facility will include bus operations, bus parking, and other support facilities. The County Board approved purchase of this property in October 2017. The other property under consideration is located in Springfield (in Fairfax County). It is anticipated that this site would accommodate heavy maintenance activities beyond that which can be accommodated in Arlington. The County Board approved the purchase of this property in December 2016, with a recent amendment in June 2017 to extend the Feasibility Period for the County and seller to determine construction and subdivision feasibility, respectively. The comprehensive ART Facilities request will implement the ART support facilities needed to implement future transit service increases as outlined in County's TDP and NVTA's TransAction. Specifically, the project includes phased construction for parking additional ART buses, facilities for maintenance and bus operations, as well as enclosed storage for transit infrastructure. When complete, ART will have the support network it needs to increase ridership, and to keep the entire bus fleet maintained and in service. This request would fund the ART Heavy Maintenance Facility and the ART Operations Facility, and includes anticipated land acquisition, design, site improvements, and phased construction. The project is currently undergoing conceptual design. The future bus service expansion that will be enabled by this project covers all of Arlington County and include dozens of additional service increments to existing routes, such as increased bus frequency and/or hours of service, as well as implementation of new routes.

TransAction Project Rating Rank:	45

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Project Impacts

- Provide the ability to increase regional transit capacity by expanding the number of buses Arlington can operate
- Reduce traffic congestion on all major roads

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Crystal City Metrorail Station Second Entrance

East Entrance and Intermodal Connections

Project Description

This project will design and construct a second entrance to the Crystal City Metrorail Station at the northwest corner of the intersection of Crystal Drive and 18th Street South. The new entrance will be located to the east of the existing entrance, which is located on south Bell Street at 18th Street South, and will provide access to the east side of the train platform. The new entrance will include two street-level elevators and stairs connecting to the fare payment area and an underground passageway and new mezzanine with stairs and elevators to the train platform. It will have fare gates, fare vending machines, and an attended kiosk. This new entrance will provide more direct access to businesses and residences on the east side of Crystal City, and will better connect to the VRE station, served by the VRE Manassas and Fredericksburg Lines; the northbound Metroway service originating in Alexandria; the ART 43, which provides direct, limited-stop service to the Rosslyn-Ballston Corridor; and the ART 92, which provides a direct connection to the Pentagon. This intermodal connectivity provides bus-to-rail transfers at one location from regional rail service to employment centers. The new entrance will relieve congested conditions at the current entrance and station platform, provide for more even passenger distribution along the platform (enabling more efficient loading/unloading, thus reducing transit crowding on trains and enabling more efficient system performance), and provide additional egress during emergency situations. This project expands upon the existing transit, roadway, pedestrian, and bicycle network in Crystal City, and leverages other projects underway that also support that effort, including the Crystal City Multimodal Center and the Crystal City Streets projects, both funded by NVTA. Arlington County plans to lead the design and construction in coordination with WMATA and JBG Smith which owns the adjacent property where part of the entrance will be located. Arlington seeks funding in place to award construction, thereby delivering the project more on a guaranteed cash flow across multiple fiscal years rather than a fixed cash flow for single fiscal years. The guaranteed cash flow could potentially speed up the project.

TransAction Project Rating Rank:	58

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Increase access/egress capacity for the station
- Provide direct connection to the Transitway station on Crystal Drive
- Improve emergency egress, making the station compliant with the National Fire Protection Act
- Reduce travel time to VRE station, businesses and residents along Crystal Drive, thereby increasing transit access
- Reduce congested operations of the station and platform.

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Pentagon City Multimodal Connections and Transitway Extension

Project Description

The Pentagon City Multimodal Connections and Transitway Extension project adds capacity and makes operational improvements to an inefficiently performing area of Pentagon City, where there is high demand for transit, pedestrian, and bicycle trips, but where the existing layout of streets makes those trips slow, difficult and dangerous. The project provides dedicated bus lanes for Metroway service, a premium bus service that operates much like bus rapid transit. It also expands safe travel options for bicycles and pedestrians, and adds turn lanes for vehicles. The project has two components: The Army Navy Drive Complete Street and the Transitway Extension to Pentagon City.

The Army Navy Drive improvements will rebuild Army Navy Drive between S Joyce Street and 12th Street S to expand capacity for transit, bicycles, and pedestrians. This component connects this section of Pentagon City to Arlington's overall high-quality pedestrian, bike, and transit network, and specifically improves the connection between the Pentagon itself and the mixed-use services of Pentagon City and Crystal City and Columbia Pike. The reconstruction provides a physically separated two-way protected bicycle lane along one side of Army Navy Drive, in addition to shorter, more practical, and safer pedestrian crossings. New turn lanes along Army Navy Drive will improve vehicular traffic flow at five locations: 2nd WB left turn lane at the Pentagon City Mall garage entrance, EB right turn lane at S Hayes St, WB left turn lane at S Fern Street, and EB and WB right turn lanes at S Eads Street. The component will accommodate high capacity transit via the addition of dedicated transit lanes between S Joyce St and S Hayes St, connecting to the other component of this project, the Transitway extension. The second component will design and construct an extension of the Crystal City Potomac Yard Transitway north through Pentagon City. The Transitway carries Metroway premium buses in dedicated bus lanes, connecting activity centers in Arlington and Alexandria. Currently the Transitway ends at 15th Street S in Crystal City. This extension brings it northwest to Pentagon City Metro station and Army Navy Drive, providing a dedicated, high-quality connection to Columbia Pike. The component provides a bus rapid transit-like experience, implementing dedicated transit lanes, passenger stations, utility relocations, signing and pavement marking, and traffic signal upgrades. Transitway stations are anticipated to be at Crystal Drive at 15th St NB, 12th & Clark Streets, 12th & Eads Streets, 12th & Hayes Streets, and Joyce Street & Army Navy Drive. The Transitway improves transit performance by speeding Metroway buses both along their route and by at stops, and by extending high-quality BRT-style service to connect with VRE, the US Drug Enforcement Agency, the US Transportation Security Administration, and with Pentagon users at the new Army Navy Drive station.

TransAction Project Rating Rank:	45

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Expand multimodal access within the Pentagon City activity center
- Extend the dedicated bus lanes of the Transitway providing for faster, more reliable service
- Add capacity for additional bus service
- Improve bicycle and pedestrian connectivity and safety between the Pentagon City Metro station and surrounding destinations
- Fill in missing links in the dedicated bus network in Arlington and Alexandria, bicycle, and pedestrian networks
- Relieve some of the ridership burden on the Yellow and Blue Metrorail lines, as well as reduce the burden on regional highways including Route 1
- Improve access to jobs\

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Intelligent Transportation System Improvements

Arlington ITS Project

Project Description

This project will improve the traffic signal infrastructure along several corridors to upgrade the Intelligent Transportation Systems, implement congestion-reducing adaptive signal optimization, and enable future initiatives such as connected vehicles and transit signal priority. The County's Adaptive Traffic Control System (ATMS) reduces delay timings and facilitates safe crossing for pedestrians at intersections. Overall the project reduces congestion and emissions, improves safety, and enables future speed improvements to bus service. By investing in this infrastructure, the public will be able to fully realize the benefits of technologically advanced ITS capabilities.

Reference Number: 2018-005-0

SPA Number: 2018-005-1

TransAction ID: 104

Submitting Jurisdiction/Agency: Arlington County

Locations: Washington Blvd. from Glebe Rd. to Columbia Pike; Crystal City/Pentagon City; Columbia Pike from Carlin Springs Rd. to Southgate Rd.

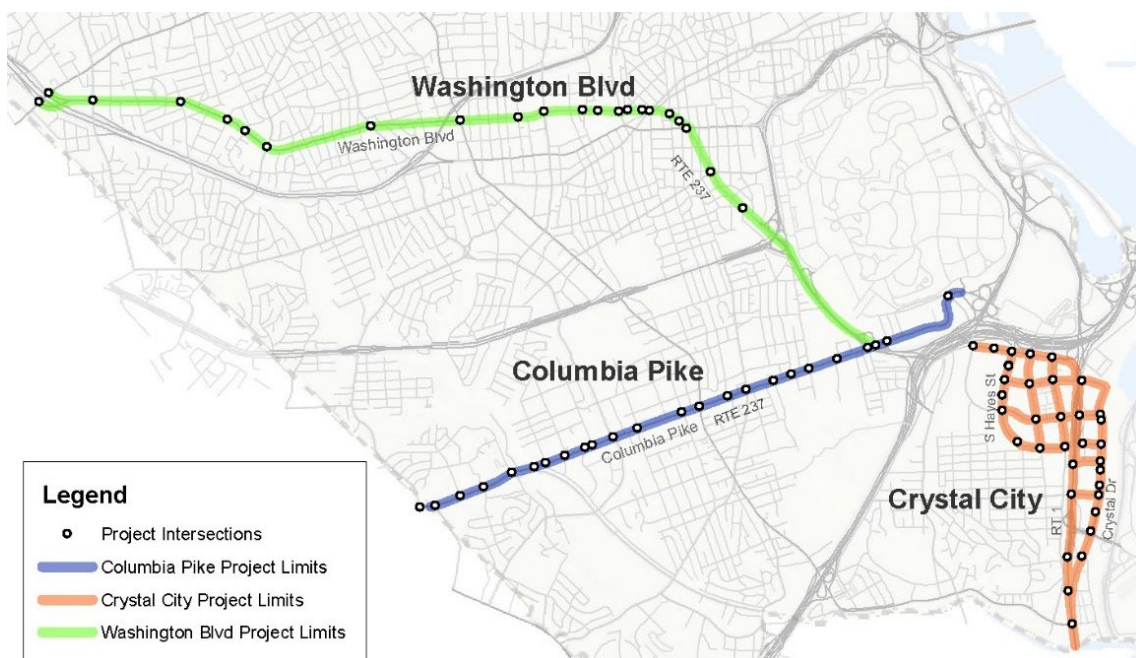

Requested NVTA Funds: \$10,000,000

NVTA Funds Received: \$10,000,000

Total Cost to Complete Project: \$10,000,000

This project will implement responsive traffic control systems that will help monitor real time traffic conditions and enable traffic signal timing optimization based on real time traffic situations when necessary. The system will also adjust the operation of traffic signals during emergency situations, facilitating the smooth operation of traffic during special events including potentially emergency evacuation. At intersections, the system reduces delay timings and facilitates safe crossing of pedestrians. The project will install additional Bluetooth devices, Count Stations, CCTV cameras, FLIR detections in order to monitor the traffic and safety of all modes. The project will also upgrade existing traffic signals to provide the capabilities to install newer technologies such as connected vehicles and transit priority. As part of this project, the County anticipates installing the hardware required for transit signal priority which will facilitate enhanced bus service in the future.

Congestion Reduction Relative to Cost Ratio (Total Cost in \$1000's):	822.22
Congestion Reduction Relative to Cost Ratio Rank (Total Cost in \$1000's):	3
TransAction Project Rating:	69.39
TransAction Project Rating Rank:	23

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Reduce congestion by moving more people efficiently and improving intersection and corridor levels of service.
- Real-time driver information including alerts to alternate routes, incidents, and detours.
- Enable improved person-throughput and tie to future planned enhanced bus service
- Infrastructure installed as part of this project can be utilized for future connected vehicle operations to improve travel times, reduce the number of stops, and reduce idling.

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Jermantown Road Corridor Improvements

Project Description

This project proposes to modify existing Jermantown Road (Rte 655) between I-66 to the north and Route 50 (Fairfax Boulevard) to the south (total project length approximately 0.7 miles) to provide improvements to reduce congestion and improve pedestrian mobility. This segment of Jermantown Road exists as a two-lane facility and experiences severe congestion during peak hour traffic. This project will make improvements including spot widening, new turn lanes, new signals, and pedestrian crossing locations to reduce the bottlenecks and improve mobility within the corridor. This project is a recommended project in the City's Multimodal Transportation Plan (see attached Policy and Project Map). The City is currently performing an alternatives analysis to determine the optimal lane configuration to improve mobility along the corridor, including both improvements for vehicular and pedestrian movements.

Reference Number: 2018-046-0

SPA Number: 2018-046-1

TransAction ID: 136

Submitting Jurisdiction/Agency: City of Fairfax

Location: Jermantown Road between Fairfax Blvd (Route 50) and City Limits (South of bridge over I-66)

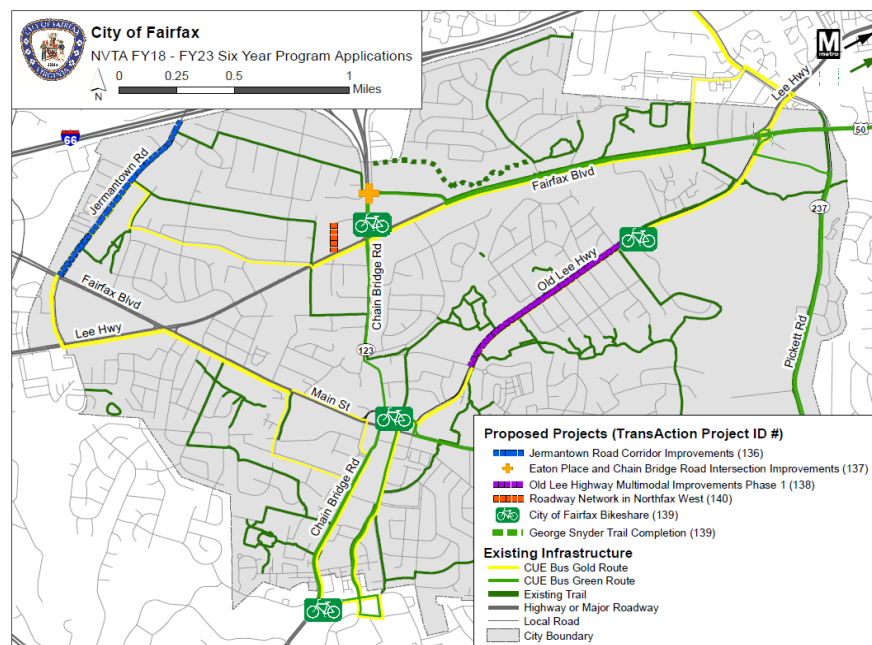

Requested NVTA Funds: \$21,000,000

NVTA Funds Received: \$21,000,000

Total Cost to Complete Project: \$21,000,000

Fairfax County has received I-66 Outside the Beltway Concessionaire funding to widen the bridge over Jermantown Road. The bridge is located within the county, just north of the City/County jurisdictional line. The City strongly supported Fairfax County's submitted project. Both the City and County requested that the I-66 project include the bridge's widening. The City's draft Comprehensive Plan calls for the widening of Jermantown Road and the bridge. Additionally, Fairfax County recently amended its Comprehensive Plan to include this widening. Jermantown Road north of the bridge is already four lanes. A wider bridge coupled with a potentially wider roadway in the City south of I-66 will facilitate the movement of traffic from the Vienna/Oakton area to access the I-66 managed-lane entrance at Monument Drive. The City would aim to complete this project prior to or concurrent with the completion of the I-66 project.

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Reduce congestion and improve mobility
- Provide better connectivity from western Fairfax to the Oakton/Vienna area

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Intersection Improvements at Eaton Place/ Chain Bridge Road

Project Description

This project will improve the intersection geometry at the Chain Bridge Road (Route 123)/Eaton Place intersection to improve vehicular flow along Route 123 and to/from the adjacent service drives and neighborhood roads. These improvements, in combination with adjacent projects occurring both inside the City (Northfax, University Drive Extension) and outside the City (I-66), will reduce congestion and improve traffic flow along this National Highway System (NHS) corridor.

The City is performing an alternatives analysis to determine the optimal solution to improve mobility at this intersection, which currently operates with eight signal phases (including four separate side street phases) to control movements at seven legs. Options under consideration include conversion to a multi-lane roundabout and/or keeping a traditional signalized intersection but removing and/or modifying some of the intersection phases to increase the through capacity of the intersection. The intersection has a current capacity of approximately 3,400 vehicles per hour; improvements to this intersection would increase that to upwards of 5,000 vehicles per hour. In addition, by improving vehicle throughput, the project will improve transit operations through this area.

Old Lee Highway Multimodal Improvements: Phase I

Project Description

This project will convert Old Lee Highway into a regional multimodal corridor connecting the city with George Mason University to the south and Fairfax County and the Vienna Metrorail station to the north.

This project is located on the existing corridor of Old Lee Highway connecting downtown City of Fairfax to the Fairfax Circle Local Activity Center at Route 50/Route 29. The project will construct improvements from Layton Drive Hall Drive to Cornell Road to provide continuous multimodal facilities on both sides of Old Lee Highway including separated bicycle and pedestrian facilities and ADA-compliant bus stops. The Old Lee Highway corridor is home to three schools, a major City park, the Civil War Interpretive Center at Historic Blenheim, the City's Sherwood Community Center, the Police Station Headquarters and multiple residential neighborhoods. The corridor is book-ended by commercial areas: the City's downtown on the southern end and Fairfax Circle on the northern end. The roadway is two lanes (one lane in each direction) and carries approximately 13,000 vehicles per day. The width of the paved surface along Old Lee Highway varies widely. There is excess pavement (unused, paved roadway outside of the travel lanes) along long stretches of the corridor. There are sidewalks provided in many locations along the corridor, but they are discontinuous, varied in width and in deteriorating condition. In many locations, the sidewalks are directly adjacent to the roadway and lack a buffer. In other areas, there are no dedicated areas for pedestrians. There are sharrows along some of the roadway. The City's local bus service CUE runs its Gold Route along Old Lee Highway.

The project area for this phase is approximately 0.7 miles long and is wholly contained in the City of Fairfax. This project would complete the "center" section of Old Lee Highway. The remainder of the roadway would be improved through one or two additional phases of work. The City has done extensive planning for this roadway (concept plan was funded through TLC program) and this project is listed as a key priority in the City's Multimodal Plan.

Roadway Network Northfax West

Project Description

This project is the construction of approximately 700 linear feet of new roadway between Fairfax Blvd/Farr Avenue and Orchard Street to create a grid network within the NW quadrant of Fairfax Blvd/Chain Bridge Road ("Northfax"). By providing an expanded grid within the Northfax area, the City seeks to reduce congestion at the Route 123/50/29 intersection, provide an expanded network for non-motorized traffic, and provide local access to existing commercial properties and future mixed-use redevelopment areas. Three private access drives are proposed to connect to the new roadway from an existing commercial property. The new roadway is scaled to promote multimodal use and includes context sensitive features appropriate for the surrounding area. The new roadway includes two-way vehicular and bicycle lanes. The vehicular lanes are 11' in width and the bicycle lanes are 5' in width. On-street parking would be provided adjacent to the northbound bicycle lane with landscaped bulb-outs. On-street parking along the southbound bicycle lane would be provided with future redevelopment. Sidewalks with variable widths of 5'-7' are included adjacent to the northbound lanes. Sidewalk is provided adjacent to a portion of the southbound lane. Additional sidewalk adjacent to the southbound lanes would be provided with future development. Standard curb and gutter and header curb would be provided. Pedestrian lighting would also be included. The total proposed right-of-way width is 50 feet.

Reference Number: 2018-049-0

SPA Number: 2018-049-1

TransAction ID: 140

Submitting Jurisdiction/Agency: City of Fairfax

Location: Between Fairfax Blvd/Farr Ave Intersection and Orchard Street, within the NW quadrant of the Fairfax Blvd/Chain Bridge Road Intersection

Requested NVTA Funds: \$2,500,000

NVTA Funds Received: \$2,500,000

Total Cost to Complete Project: \$5,000,000

This project is a component of a larger set of Northfax Network Improvements, many of which are already underway. The City has spent approximately \$40M to make roadway and drainage improvements to the Route 50/29/123 intersection as part of the Northfax project (scheduled for December 2018 completion). The City has also received almost \$10M in Smart Scale funds to construct the University Drive Extension project, which is construction of a new roadway between Fairfax Boulevard and Eaton Place in the east Northfax quadrant. The Northfax West project is similar in scope to the University Drive Extension project in that its purpose is to provide a new roadway to improve mobility and pedestrian connectivity. The City is also applying for funding to improve the Chain Brian Road/Eaton Place intersection, which is a critical intersection on the Chain Bridge Road/Route 123 corridor that, in its current configuration, causes congestion on both Chain Bridge Road and Eaton Place.

- Improve connectivity
- Improve accessibility

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

West Falls Church and Joint Campus Revitalization District Multimodal Transportation Project

Project Description

Increasingly, State, Regional and Local Plans are recognizing the effectiveness and cost efficiency of investing in multimodal transportation options. Multimodal options have been repeatedly shown to be the most cost-effective transportation investments. This project reflects that trend by investing in multimodal transportation options near the West Falls Church Metrorail Station. The scope of this project includes intersection and signal improvements, pedestrian access improvements, bicycle access improvements, bus stop enhancement, and utility relocation/undergrounding. Signals will be installed or updated at or near the Chestnut Street & W Broad Street/Route 7 intersection, Haycock Road & W Broad Street/Route 7 intersection, and Haycock Road and Schools Access Road intersection. A high-intensity activated crosswalk (HAWK) signal will be installed on Haycock Road to allow better connectivity and access to the school's area campus. Pedestrian access improvements will be made at the above listed intersections as well as along West Broad Street between the Metro Station Exit and Haycock Road. Improvements will also be made along both sides of Haycock Road between W Broad Street/Route 7 and the City line. Utility relocation/undergrounding and bicycle access improvements will take place along Haycock/Shreve Road and along W Broad Street within the project boundary.

Requested NVTA Funds: \$15,700,000

NVTA Funds Received: \$15,700,000

Total Cost to Complete Project: \$15,700,000

The City is designated as a regional activity center and has recently been a focus of infill development. Immediately adjacent to the project area, the City is planning for 10 acres of redevelopment, with a likely minimum Floor Area Ratio (FAR) of 3.5. This would result in a minimum of 1.5 million square feet of additional development. Without viable travel alternatives, new City residents and workers will have little choice but to add to the automobile congestion on the already crowded regional highway network in the Route 7 Corridor and the I-66 Corridor. Expanding multimodal transportation options and extending the catchment area of the West Falls Church Metro Station will increase travel options and reduce pressure on the regional highway system.

Project Analysis Highlights

Congestion Reduction Relative to Cost Ratio (Total Cost in \$1000's):	5.01
Congestion Reduction Relative to Cost Ratio Rank (Total Cost in \$1000's):	48
TransAction Project Rating:	52.57
TransAction Project Rating Rank:	57

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- This project is expected to support economic growth.
- This project is expected to support an interconnected network.
- This project is expected to provide effective, cost-efficient transportation benefits.
- This project is expected to provide expanded travel choices.
- This project is expected to manage both demand and capacity.
- This project is expected to promote areas of concentrated growth.

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Falls Church Enhanced Regional Bike Routes (W&OD Trail)

Project Description

The project is to replace the existing 10-foot wide shared-use trail with an 11-foot wide bicycle trail and an 8-foot wide pedestrian trail separated by a 2-foot wide median. Six substandard curb ramps and a narrow trail bridge over Four Mile Run will also be replaced. The length of the project is 1.2 miles in the City of Falls Church, extending from Broad Street (Route 7) to east of Little Falls Street and is the first phase of efforts to improve levels of service along congested portions of the W&OD Trail. The 45-mile long trail traverses the counties of Arlington, Fairfax, and Loudoun, the City of Falls Church, and the towns of Vienna, Herndon, and Leesburg. In a significant step to encourage non-motorized transportation, NOVA Parks extended hours of use to include commuting hours. The W&OD in the project area connects to six roadways, each with sidewalk connections, which provide direct access to commuter routes for Metrobus. As part of VDOT's plans to widen I-66, it is constructing a W&OD Trail bridge over Lee Highway so that trails users will no longer cross five hazardous lanes of traffic. The bridge and parallel trails will significantly enhance first and last mile non-motorized access to the East and West Falls Church Metrorail Stations (.75 mile and .5 mile from the project area respectively) and bicycle access for commuters continuing into Arlington County, Alexandria, and Washington, D.C. The trail bridge will be 20 feet wide to accommodate parallel bicycle and pedestrian trails.

Reference Number: 2018-062-0

SPA Number: 2018-062-1

TransAction ID: 134

Submitting Jurisdiction/Agency: Northern Virginia Regional Park Authority (NOVA Parks)

Location: W&OD Trail, City of Falls Church, Broad Street (Route 7) to Little Falls Street.

Requested NVTA Funds: \$3,793,209

NVTA Funds Received: \$3,244,959

Total Cost to Complete Project: \$3,793,209

The W&OD passes through and near designated revitalization areas along Broad Street (Route 7) and Washington Street (Route 29). The city is a Regional Activity Center and is working to increase multimodal options to keep up with regional travel demand. This project will increase usage of the W&OD and increase patronage at nearby commercial uses and employment destinations. The parallel trails will provide greater capacity and encourage bicyclists and pedestrians who may avoid the facility due to overcrowding. As experience currently, at LOS D for pedestrians, there are frequent conflicts with bicyclists and at LOS F there are significant conflicts and a diminished experience for pedestrians. These conflicts and diminished experiences result in avoidance of the trail by users who do not feel safe, which will worsen as volumes increase.

Project Analysis Highlights

Congestion Reduction Relative to Cost Ratio (Total Cost in \$1000's):	34.18
Congestion Reduction Relative to Cost Ratio Rank (Total Cost in \$1000's):	19
TransAction Project Rating:	50.00
TransAction Project Rating Rank:	60

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Provide enhanced bike and pedestrian access to the two Metrorail stations within the I-66 corridor
- Enhance mobility options by making the existing non-motorized transportation system easier and safer.
- Reduce road congestion

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Widen Route 1 (Fraleley Blvd.) to Six Lanes

Between Brady's Hill Road and Dumfries Road (Route 234)

Project Description

Route 1 Northbound (Fraleley Blvd) between Route 1109 (Brady's Hill Road) and Route 234 (Dumfries Road) is classified as an Urban Principal Arterial. Route 1 Southbound is on a separate alignment. This project will convert northbound Route 1 from a 2-lane undivided roadway to a divided 6-lane so both northbound and southbound traffic will be on the northbound alignment. The proposed typical section for the 2.1-mile project will consist of a six-lane facility with three 12' lanes in each direction. In addition to the six travel lanes, an outside lane will be added for bicycle use in both directions. The proposed design will provide a 16' raised median with sidewalks and shared use paths on opposite sides of the roadway. The design will follow the GS-5 (Urban Principal Arterial) standard at 45 mph design speed, as outlined in the Road Design Manual. The typical section will include CG-7 curbing and buffer space adjacent to pedestrian facilities. The roadway super-elevation will be based on urban low speed (TC-5.11 ULS) design standards. Side slopes will be 3:1 or flatter, where space is available. The existing southbound Route 1 (Main St) is on a separate alignment from northbound Route 1 (Fraleley Rd) within the project limits. The separate alignment will be converted to a two-way road for local traffic after the six-lane widening is completed. Environmental studies and the NEPA document have been completed. A Public Hearing is planned for this project in early 2018.

Route 1 Widening

Mount Vernon Memorial Highway to Napper Road

Project Description

The US Route 1 (known as Richmond Highway in Fairfax County) Corridor Improvements project (Route 1 Widening project) will provide multimodal improvements including roadway widening along the 2.91-mile section of Route 1 between Mt. Vernon Memorial Highway/Jeff Todd Way and Napper Road in Fairfax County. US Route 1 is currently classified as an Urban Principal Arterial. This project will increase the number of through travel lanes along Route 1 from four lanes to six lanes. In addition, it will provide a median reservation for future Bus Rapid Transit (BRT), intersection improvements, the replacement of three bridges, secure pedestrian crossings, as well as 6.5-foot wide off-road bicycle paths and 6-foot wide sidewalks on both sides of the roads.

The project will seamlessly connect, on the south end, to the segment of Route 1 from Telegraph Road to Mt. Vernon Memorial Highway which was recently widened as part of the Federal Highway Administration (FHWA) Route 1 – Fort Belvoir project. This project will also connect to the existing six-lane segment of Route 1 north of Napper Road, resulting in a continuous six-lane facility from Fort Belvoir to I-95/I-495 in Alexandria. The roadway widening will help reduce congestion on about 10 miles of Route 1. Moreover, this project will improve safety for all users through various means. It will implement access management strategies such as the consolidation of driveways and other access points to reduce conflict points resulting in better safety and traffic flow. In addition, this project will implement intersection improvements to accommodate exiting and projected travel demand. These intersection improvements will include the addition of turn lanes, the provision of emergency signal preemption, pedestrian-activated countdown signals, transit signal priority for the future BRT, and potentially alternative intersection designs. This project is currently in the design stage.

TransAction Project Rating Rank:	8

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Enhance the quality of life and economic strength
- Enable optimal use of the transportation network and leverage the existing network
- Establish a consistent six-lane section and enable the future median-running BRT system
- Reduce negative impacts of transportation on communities and the environment
- Reduce auto traffic volumes
- Improve reliable travel times for motorists and transit

- Provide frequent transit service, bicycle and pedestrian facilities

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Richmond Highway Bus Rapid Transit

Phases I & II

Project Description

The Richmond Highway (Route 1) Bus Rapid Transit (BRT) project includes median running BRT from Huntington Metro Area to Fort Belvoir. The project will include new transit stations, facilities for bicycle, pedestrian, and vehicle travel modes.

In 2015, the Department of Rail and Public Transportation (DRPT) led a transportation study for Richmond Highway called the Route 1 Multimodal Alternatives Analysis, which evaluated the benefits, costs, and impacts of implementing multimodal improvements along a 15-mile stretch of Richmond Highway, from the I-95/I-495 Beltway area, through Fairfax County, to the VRE Station at Woodbridge in Prince William County. Through stakeholder participation and technical analysis, the study recommended transportation improvements for adoption by Fairfax County and Prince William County. This recommendation from the study included a phased approach, which was to implement median running BRT in the near-term between Huntington in Fairfax County to Woodbridge in Prince William County and expanding Metrorail to Hybla Valley, Fairfax County in the long-term.

In May 2015, the Fairfax County Board of Supervisors endorsed phases I and II of the preferred transit alternative, which was to implement median running BRT from Huntington to Accotink Village, Fort Belvoir. The Board action also included language for staff to work on updating the comprehensive plan to include elements along the corridor that would be supportive of BRT and other necessary actions for BRT implementation.

TransAction Project Rating Rank:	2

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Enhance quality of life and economic strength
- Implement a multimodal transportation system, including BRT, bicycle, and pedestrian facilities
- Improve connectivity to Fort Belvoir and the Fort Belvoir Community Hospital, two very large employment centers in south eastern Fairfax County.
- Enable optimal use of the transportation network and leverage the existing network
- Reduce negative impacts of transportation on communities and the environment

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Frontier Drive Extension and Intersection Improvements

Project Description

The project will extend Frontier Drive from its current southern terminus at the Joe Alexander Transit Center to Loisdale Road, through the Springfield Industrial Park, generally along the existing Spring Center Drive alignment. The extension would facilitate traffic and transit access to the Transit Center, which includes the Franconia-Springfield Metrorail Station serving both the Washington Metropolitan Area Transit Authority (WMATA) Metrorail and Virginia Railway Express Commuter Rail systems; and via the proposed braided ramps to and from the Franconia-Springfield Parkway. The extension will provide a more direct connection for twenty transit routes and Greyhound bus service, some of which will operate between the Transit Center and the General Services Administration (GSA)/Springfield Industrial Park road network and the Northern Virginia Community College (NVCC). The current disconnected roadway forces transit providers to develop circuitous routes to reach the GSA road network. The more direct routing is anticipated to reduce travel time by 3 to 4 minutes on each trip. The project will also provide pedestrian and bicycle facilities along Frontier Drive and will support the relocation of the Transportation Security Administration headquarters adjacent to the GSA site, which will be located in the vicinity of Springfield Center Drive and is expected to bring more than 3,000 jobs by 2020.

Reference Number: 2018-009-1

SPA Number: 2018-009-2

TransAction ID: 84

Submitting Jurisdiction/Agency: Fairfax County

Location: Frontier Drive to Loisdale Road

Requested NVTA Funds: \$79,500,000

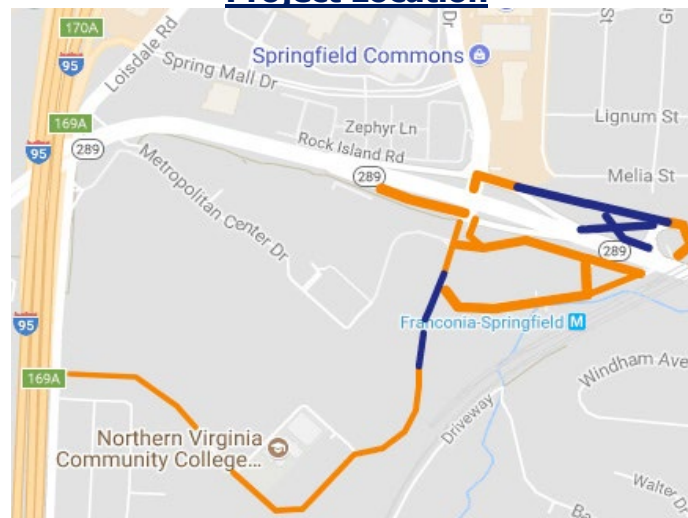

NVTA Funds Received: \$25,000,000

Previous NVTA Funds Received: \$2,000,000

Total Cost to Complete Project: \$116,070,000

The proposed Frontier Drive Extension is envisioned to run on the western portion of the Transit Center property, and would affect current station access and circulation. The new roadway would require conversion of the existing southbound entrance road from Frontier Drive and the Franconia-Springfield Parkway into a new, two-way, four-lane, divided, minor arterial facility, with associated turn lanes and a new entrance accessing the Transit Center. Improvements include the Frontier Drive Extension to Loisdale Road (Route 789), braided ramps at the Franconia-Springfield Parkway & Frontier Drive interchange, traffic signalization at two (2) intersections and internal circulation enhancements at the Franconia-Springfield Transit Center. The project is identified in the Fairfax County Comprehensive Plan (2013) and in VDOT's Six-Year Improvement Program (Year 2017). Partial funding has been established for the Preliminary Engineering (PE) phase of this project. Franconia-Springfield Parkway is classified as a National Highway System (NHS) non-Interstate facility.

Note: There is a funding gap of \$81,070,000, for which Fairfax County plans to apply for funds through the state's Smart Scale program the NVTA's next Call for Projects or other local, federal and/or private sources.

Project Analysis Highlights

Congestion Reduction Relative to Cost Ratio (Total Cost in \$1000's):	8.43
Congestion Reduction Relative to Cost Ratio Rank (Total Cost in \$1000's):	42
TransAction Project Rating:	69.80
TransAction Project Rating Rank:	21

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Enhance the quality of life and economic strength
- Reduce congestion on I-95 between the Fairfax County Parkway and Old Keene Mill Road (Route 644), and in the area around the Springfield Town Center.
- Improve travel times
- Provide mode options through on-road bicycle lanes, sidewalks and a shared-use path
- Increase access to jobs, employees, markets, and destinations

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Route 28 Widening: Route 29 to Prince William County Line

Project Description

The original scope of this Route 28 project provided for the widening of Route 28 from 4-lanes to 6-lanes (3 lanes in each direction) from the Prince William County Line (bridge over Bull Run) to Route 29. The project includes bicycle and pedestrian facilities on throughout the project limits, and intersections.

After completing the initial traffic analyses, it was determined that a 6-lane facility was inadequate to handle the projected 2040 traffic volumes (see further discussion of traffic analysis under 6.2). The scope has therefore been revised to widen Route 28 from the Prince William County Line to the Route 29 Interchange from the existing 4-lanes to 7/8-lanes, including intersection improvements on all side streets by adding turn lanes and eliminating split phase signals. This Project also includes potentially relocating/realigning the Ordway Road/Compton Road/Old Centreville Road Intersection to improve traffic operations and safety through the corridor. The project will add two lanes in the southbound direction from Rt. 29 to Compton Road; and one lane in the southbound direction from Compton Road to the Bull Run Bridge (Prince William County line). It will add one lane in the northbound direction from the Bull Run Bridge to a point approximately 1,000 feet south of New Braddock Road; and two lanes in the northbound direction from this point, northward to the existing interchange at Route 29. Fairfax County application is for the original widening (to 6 lanes), with funding for the expanded scope being sought from other sources.

Note: There is a funding gap of \$22,270,000

Project Analysis Highlights

Congestion Reduction Relative to Cost Ratio (Total Cost in \$1000's):	77.88
Congestion Reduction Relative to Cost Ratio Rank (Total Cost in \$1000's):	11
TransAction Project Rating:	68.40
TransAction Project Rating Rank:	25

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Enhance the quality of life and economic strength
- Reduce congestion on a heavily traveled section of the VA Route 28 corridor
- Improve multi-modal travel by adding pedestrian/bicycle facilities
- Improve travel times and reliability along the entire Route 28 corridor in Fairfax County and beyond.

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Richmond Highway CSX Underpass Widening

Project Description

As a part of the effort to widen Richmond Highway from I-495 to Prince William County, the project lowers and widens the roadway to eventually accommodate six lanes of traffic and facilitate alternative modes of transportation. Building upon the Virginia Department of Rail and Public Transportation (DRPT) Atlantic Gateway program, the Richmond Highway CSX Underpass Widening project leverages an innovative federal, state, and private sector partnership to make critical intermodal and safety improvements to the existing roadway facility and proposed railroad bridge upgrades at the intersection of Richmond Highway and the CSX Railroad.

The Atlantic Gateway program replaces the existing railroad bridge with a new, expanded facility with three tracks. The current bridge is too low to allow trucks to pass under the bridge and too narrow to accommodate the roadway widening and bicycle and pedestrian facilities. The Atlantic Gateway program, awarded FASTLANE grant program funding in FY 2016, only adds a single new track and bridge and precludes the ability to widen the roadway. This project retains and expands upon that element of the Atlantic Gateway. The resulting improved roadway and railroad bridge will widen and lower the roadway to increase vertical clearance that will: 1) Accommodate a future Bus Rapid Transit (BRT) system; 2) Enable the movement of additional goods by eliminating the existing truck restriction at the bridge; 3) Create pedestrian and bicycle facilities; and 4) Reduce automobile, pedestrian, and truck accidents on Richmond Highway.

Rolling Road Widening

Hunter Village Drive to Old Keene Mill Road

Project Description

This project involves widening Rolling Road (Route 638) from a two to a four-lane divided roadway between Viola Street and Old Keene Mill Road, with pedestrian and bicycle facilities. In addition to widening Rolling Road, the project involves the following improvements:

- Implement access management by constructing a median on Rolling Road between Viola Street and Kenwood Avenue
- Construct dedicated left turn lanes at major intersections
- Construct an additional northbound left turn lane at the Old Keene Mill Road intersection
- Install a traffic signal at the intersection of Rolling Road at Greeley Boulevard
- Reduce congestion, enhance safety for all users, and improve access to points east and west while planning to meet future traffic demands,
- Providing storm-water management facilities.
- Provide continuity from both the south and north directions.
- This project also includes a shared-use path to increase safety for non-motorized users.

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Reduce congestion by providing additional capacity on a highly congested north-south corridor
- Enhance the quality of life and economic strength
- Improves the safety of transportation network, and sustains and improves operation of the regional system

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Fairfax County Parkway Widening

*Ox Road to Lee Highway, including a grade-separated interchange
at the intersection of Popes Head Road*

Project Description

This project provides for the widening of Fairfax County Parkway from Ox Road (Route 123) to just north of Lee Highway (Route 29) from four to six lanes, and a grade separated interchange at the intersection of Fairfax County Parkway and Popes Head Road. Improvements will also be made to the existing Fairfax County Parkway Trail. Where there is no trail currently, a new shared-use path will be constructed to make the trail continuous within the project limits. Conceptual design assumes that all existing lanes will be salvaged and that 12' of pavement will be added to the inside median and 2' will be added to the outside to accommodate the future HOV lanes. The typical section has not been finalized, but shall not preclude future HOV additions or conversion. All signalized intersections are assumed to be full replacements and no new signalized intersections are being added.

Reference Number: 2018-016-2

SPA Number: 2018-016-3

TransAction ID: 57

Submitting Jurisdiction/Agency: Fairfax County

Location: North of Lee Highway to Ox Road

Requested NVTA Funds: \$67,000,000

NVTA Funds Received: \$67,000,000

Previous NVTA Funds Received: \$20,000,000

Total Cost to Complete Project: \$191,300,000

The interchange will provide significant congestion relief as well as improve safety at the signalized intersection at Popes Head Road. The project will provide for the future connection to Shirley Gate Road to the east, which was identified to improve regional north-south travel in this area of the County and alleviate congestion along the parallel Route 123 to the east. It is anticipated that the Shirley Gate Road extension will be built as a separate project after the interchange project is completed; however, the portion of the roadway from Fairfax County Parkway to the future Fairfax County Park Access Road entrance would be built as part of the interchange project. The interchange also includes shared use paths on Fairfax County Parkway.

Project Funding

	Requested NVTA Funds	NVTA Funds Received	Other Funding Sources	Total Cost by Phase
Design, Engineering, Environmental Work			\$10,000,000 (NVTA 70% Funds) \$4,000,000 (Local)	\$14,000,000
Right of Way Acquisition	\$22,000,000	\$22,000,000	\$10,000,000 (NVTA 70% Funds)	\$32,000,000
Construction	\$45,000,000	\$45,000,000	\$50,500,000 (Smart Scale) \$5,500,000 (RSTP)	\$145,300,000
TOTAL:	\$67,000,000	\$67,000,000	\$80,000,000	\$191,300,000

Note: There is a funding gap of \$44,300,000. Fairfax County plans to pursue the remaining funding gap through the state's Smart Scale program, the NVTA's next Call for Projects or other local, federal, and/or private sources.

Project Analysis Highlights

Congestion Reduction Relative to Cost Ratio (Total Cost in \$1000's):	73.05
Congestion Reduction Relative to Cost Ratio Rank (Total Cost in \$1000's):	12
TransAction Project Rating:	76.40
TransAction Project Rating Rank:	6

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Enhance quality of life and economic strength by improving connections among areas of concentrated growth.
- Reduce congestion and increase travel time reliability along the corridor and at the interchange at Popes Head Road
- Provide more mode options and expand travel choices for commuters through new bus route between Herndon Metrorail Station and Franconia-Springfield Metrorail/VRE Station via the Parkway to be implemented in Fiscal Year 2020.

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Rock Hill Road Bridge

Davis Drive Extension and Dulles Toll Road: Rock Hill Overpass

Project Description

The Rock Hill Road Bridge will be a new connection between Fairfax County and Loudoun County over the Dulles Toll Road. The new bridge will connect Sunrise Valley Drive over Dulles Toll Road to Innovation Avenue in Loudoun County. The new connection would be located just west of the Innovation Center Metrorail Station. The project will include a new four-lane divided road and bridge with curb and gutter, eleven-foot lanes, eight-foot raised grass median, six-foot bike lanes, and five-foot sidewalk on both sides. The proposed roadway would provide an additional crossing Dulles Corridor in the area, and provide direct connections within the Innovation Center Transit Station Area. The project would provide additional capacity across the Dulles Corridor, reduce congestion and delay on Route 28 and Centreville Avenue, and improve accessibility and mobility to and within the area surrounding the Innovation Center Metrorail Station.

Construct Interchange at Route 7 and Battlefield Parkway

Project Description

This project includes development of a grade-separated interchange between East Market Street (Route 7) and Battlefield Parkway in Leesburg. The project will also convert the existing signalized intersection at East Market Street and Cardinal Park Drive to an unsignalized right-in/right-out intersection. At completion of this project and other projects either planned or under construction, all traffic signals will be eliminated from Route 7 for a 38-mile segment between Algonkian Parkway and Berryville. The purpose of the project is to relieve congestion, improve traffic operations, improve safety, improve pedestrian access, and to allow Route 7 to function as a limited access corridor within the Town in accordance with the Town Plan. The project was originally included in the 1986 Leesburg Town Plan, and continues to be in the Town Plan today. The project is also included in the Town's Capital Improvement Program, the Loudoun Countywide Transportation Plan, the Loudoun County Capital Improvement Program, VDOT's Six-Year Improvement Program, and the National Capital Region Transportation Planning Board's 2016 Amendment to the Constrained Long Range Plan (CLRP).

Reference Number: 2018-054-2

SPA Number: 2018-054-3

TransAction ID: 193

Submitting Jurisdiction/Agency: Town of Leesburg

Location: See map below.

Requested NVTA Funds: \$25,000,000

NVTA Funds Received: \$25,000,000

Previous NVTA Funds Received: \$33,000,000

Total Cost to Complete Project: \$58,000,000

The Route 7 corridor carries inter-state and intra-state traffic from the west and north to employment corridors and activity centers in the Dulles area and Washington, D.C. metropolitan area. The corridor routinely experiences severe congestion, especially during afternoon peak periods. VDOT, in cooperation with the Town of Leesburg and Loudoun County, is preparing an Interchange justification report (IJR) for the project (Attachment 2 – Draft Interchange Justification Report). As part of the IJR, traffic forecasts and traffic analyses were performed (see Chapters 6 – Traffic Volumes and Chapter 7 – Traffic Analysis of the IJR). The traffic analysis concluded that the proposed interchange will improve operations along Route 7 based on corridor travel times, speeds, densities, vehicle throughputs, and arterial intersection operation results. In addition to improving motorized vehicle operations, this project will also improve pedestrian and bicycle access and connectivity. There currently is a missing link in the sidewalk / shared use path system along Battlefield Parkway that establishes a barrier that prevents pedestrians and bicyclists from safely crossing Route 7. Earlier this year, the Town established a trail network along Battlefield Parkway. Because of this missing link, bicyclists riding along Battlefield Parkway must travel nearly two miles further to cross Route 7 at River Creek Parkway. The proposed interchange will provide a grade-separated crossing of Route 7 for bicyclists and pedestrians.

Construction	\$25,000,000	\$25,000,000	\$31,000,000 (NVTA 70%)	\$56,000,000
TOTAL:	\$25,000,000	\$25,000,000	\$33,000,000	\$58,000,000

Note: Right of Way expenses are included in the Design costs.

Project Analysis Highlights

Congestion Reduction Relative to Cost Ratio (Total Cost in \$1000's):	30.70
Congestion Reduction Relative to Cost Ratio Rank (Total Cost in \$1000's):	21
TransAction Project Rating:	71.12
TransAction Project Rating Rank:	16

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Reduce congestion and delay experienced by commuters and local residents on a daily basis.
- Improve access to jobs for commuters from points north and west traveling to employment centers further east.
- Improve travel time reliability by reducing congestion experienced during peak periods.
- Improve the multimodal transportation system by eliminating barriers to pedestrians and bicyclists who desire to cross Route 7 and travel between residential areas and commercial centers. Also improves access to the W&OD Regional trail for residents living north of Route 7.
- Reduce air pollution by reducing congestion.
- Improve safety by separating higher speed through traffic from slower speed local roads.

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Interchange Improvements at Route 15 Leesburg Bypass and Edwards Ferry Road

Project Description

The existing intersections between the Route 15 Leesburg Bypass and Edwards Ferry Road and between the Bypass and Fort Evans Road are two of the most congested and high accident intersections within the Town of Leesburg. The Bypass also acts as a barrier that inhibits east-west movements on Battlefield Parkway by motor vehicles, pedestrians and bicycles. Development of an interchange at this location was first included in the Leesburg Town Plan in 1986 and continues to be included in the current Town Plan the Loudoun Countywide Transportation Plan, and the Metropolitan Washington Council of Governments (MWCOC) Constrained Long-Range Plan. During the past three years, the Virginia Department of Transportation has been preparing an Interchange Justification Report (IJR), Preliminary Plans, and a NEPA Environmental Document for the project. The Leesburg Town Council endorsed the interchange configuration in May 2017. A final Public Hearing for the project is scheduled for April 2018. It is anticipated that by summer 2018, the IJR will be approved, the NEPA document will be approved, and the preliminary design will be completed. At that point, the project will be ready for final design and construction. Depending on the schedule for obtaining funding, the project could be constructed under a design-build contract. If that approach is taken, the process for procuring and Design-Build contractor could begin immediately.

Reference Number: 2018-055-2

SPA Number: 2018-055-3

TransAction ID: 131

Submitting Jurisdiction/Agency: Town of Leesburg

Location: See map below.

Requested NVTA Funds: \$105,700,000

NVTA Funds Received: \$5,400,000

Previous NVTA Funds Received: \$2,000,000

Total Cost to Complete Project: \$112,000,000

The existing at-grade intersections of the Route 15 Leesburg Bypass with Edwards Ferry Road and Fort Evans Road are two of three remaining signalized intersections on the Bypass. Route 15 is part of the National Highway System that serves as a major commuter route between northern Loudoun County, Maryland, and Pennsylvania and employment centers in eastern Loudoun County, Fairfax County, and points further east. Both of the intersections have large retail stores and shopping centers, including Kohls, Target, Costco, Home Depot, Leesburg Premium Outlets, Walmart, and others. There is also very heavy weekend traffic from local residents, shoppers, and travelers along the east coast. Traffic volumes and analyses have been performed as part of the IJR. Congestion at both intersections is severe – traffic studies indicate a forecasted level of service F during specific peak periods.

TransAction Project Rating Rank:	50

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Reduce congestion and delay experienced by commuters and local residents on a daily basis.
- Improve access to jobs for commuters from northern Loudoun County, Maryland and Pennsylvania traveling to employment in eastern Loudoun County, Fairfax County and points further east.
- Improve travel time reliability by reducing congestion experienced during peak periods.
- Reduce congestion on weekends and during holiday shopping seasons for local and regional drivers going to the various retail centers in the interchange area.
- Improve the multimodal transportation system by eliminating barriers to pedestrians and bicyclists who desire to cross the Route 15 Bypass and travel between residential areas west of the Bypass and shopping /employment area to the east.
- Reduce air pollution by reducing congestion.
- Improve safety by separating high volume, high speed Bypass traffic from the slower speed local traffic.

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Construct Interchange at Route 15 Bypass and Battlefield Parkway

Project Description

The existing intersection between the Route 15 Leesburg Bypass and Battlefield Parkway is one of the most congested intersections within the Town of Leesburg. The Bypass also acts as a barrier that inhibits east-west movements on Battlefield Parkway by motor vehicles, pedestrians and bicycles. The funding requested under this project is for the initial steps of developing a grade-separated interchange. This includes preparation of an interchange justification report (IJR) to evaluate the need for the interchange, comparison of alternative designs, analysis of environmental impacts, and establishment of a project budget. Development of an interchange at this location was first included in the Leesburg Town Plan in 1986 and continues to be included in the current Town Plan. The project is also included in the Loudoun County Transportation Plan. During rezoning for adjacent residential developments, right of way for the interchange was provided. Accordingly, little or no additional right of way is expected to be required.

Reference Number: 2018-056-0

SPA Number: 2018-056-1

TransAction ID: 96

Submitting Jurisdiction/Agency: Town of Leesburg

Location: See map below.

Requested NVTA Funds: \$2,000,000

NVTA Funds Received: \$2,000,000

Total Cost to Complete Project: \$60,000,000

The existing at-grade intersection of the Route 15 Leesburg Bypass with Battlefield Parkway is one of three remaining signalized intersections on the Bypass. The other two traffic signals on the Bypass will be eliminated with the construction of an Interchange with Edwards Ferry Road and Fort Evans Road. The project is located at the southern terminus of proposed widening of Route 15 between Battlefield Parkway and Montresor Road. Route 15 is part of the National Highway System that serves as a major commuter route between northern Loudoun County, Maryland, and Pennsylvania and employment centers in eastern Loudoun County, Fairfax County, and points further east. There is also very heavy weekend traffic from local residents and travelers along the east coast. Peak traffic volumes on Route 15 were approximately 2,000 VPH in 2015, and are forecast to increase to approximately 2,500 VPH in year 2040. Battlefield Parkway serves as an arterial loop around the east side of Leesburg, and serves local residential and business traffic. Traffic on Battlefield Parkway is forecast to increase by approximately 30% from slightly less than 1,000 VPH in 2015 to over 1,300 VPH by 2040. Congestion at the intersection is severe – traffic studies indicate a current level of service F during the weekday afternoon peak period.

Design, Engineering, Environmental Work	\$2,000,000	\$2,000,000		\$6,000,000
Right of Way Acquisition				\$5,000,000
Construction				\$49,000,000
TOTAL:	\$2,000,000	\$2,000,000		\$60,000,000

Note: This project has a funding gap of \$58,000,000.

Project Analysis Highlights

Congestion Reduction Relative to Cost Ratio (Total Cost in \$1000's):	10.58
Congestion Reduction Relative to Cost Ratio Rank (Total Cost in \$1000's):	39
TransAction Project Rating:	72.54
TransAction Project Rating Rank:	12

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Reducing congestion and delay experienced by commuters and local residents on a daily basis.
- Improving access to jobs for commuters from northern Loudoun County, Maryland and Pennsylvania traveling to employment in eastern Loudoun County, Fairfax County and points further east.
- Improving travel time reliability by reducing congestion experienced during peak periods.
- Improving the multimodal transportation system by eliminating barriers to pedestrians and bicyclists who desire to cross the Route 15 Bypass and travel between residential areas and schools, parks, churches and other facilities.
- Reducing the need for cut-through traffic by commuters using neighborhood roads to avoid congestion on the primary arteries.
- Reducing air pollution by reducing congestion.
- Improving safety by separating high volume, high speed Bypass traffic from the slower speed local traffic.

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Route 15 Bypass Widening: Battlefield Parkway to Montresor Road

Project Description

This project will implement the improvement recommendations from the Route 15 Congestion Report presented to the Board on May 18, 2017. This project will widen 3.5 miles of U.S. Route 15 from Battlefield Parkway to Montresor Road. This principal arterial will be widened from 2-lanes to 4-lanes divided between the limits described. Additional improvements are required to transition the improved 4-lane section to the existing 2-lane section north of Montresor Road. The project will also improve the intersection at King Street and Whites Ferry Road/Raspberry Falls Drive. Widening this key arterial route north of Leesburg will provide more capacity along the project corridor, relieve congestion that impacts Leesburg and the village of Lucketts, and reduce the attractiveness of secondary routes for commuters through Waterford and Stumptown. A shared use path will also be constructed along the east side of this project to connect pedestrians and bicyclists from Battlefield Parkway to Whites Ferry Road.

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Increase access to employees, markets, jobs and destinations
- Improve connections among and within areas of regional growth
- Increase network safety
- Increase integration between modes and systems by providing new shared-use path
- Improve operation of regional system
- Reduce negative impacts of transportation on communities and the environment

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Northstar Boulevard Shreveport Drive to Tall Cedars Parkway

Project Description

Northstar Boulevard is planned to open as a 4-lane controlled access divided road within a 6-lane Right of Way from Tall Cedars Parkway to Shreveport Drive, including shared use paths (10-foot-wide) on both sides. Northstar Boulevard provides an alternative to Route 606 to points north from Route 50, alleviating congestion on Route 606 and creating better access to the Brambleton and Stone Ridge areas. VDOT has recognized Northstar Boulevard as part of a North/South Corridor of Statewide Significance due to its potential to reduce congestion on parallel north/south routes between I-95 and Dulles Airport and to connect travelers to activity centers in Loudoun County and beyond.

Reference Number: 2018-022-0

SPA Number: 2018-022-1

TransAction ID: 119, 188

Submitting Jurisdiction/Agency: Loudoun County

Location: Shreveport Drive to Tall Cedars Parkway

Requested NVTA Funds: \$89,805,000

NVTA Funds Received: \$64,805,000

Total Cost to Complete Project: \$135,180,000

This project will construct approximately 2.25 miles of Northstar Boulevard as a minor arterial that will be a key north/south connection on the west side of Dulles International Airport. The north terminus of this project will construct the 4th leg of the Shreveport Road and Northstar Boulevard intersection and install a new Traffic Signal. This project will provide dedicated left and right turn lanes from Shreveport Drive to southbound Northstar Boulevard as well as turn lanes on the new Northstar Boulevard leg. Where this new segment of the Northstar Boulevard crosses over Evergreen Mills Road, directional ramps will be constructed on the east side of Northstar Boulevard to provide access to Evergreen Mills Road. This project will construct a new signalized intersection at U.S. Route 50. Left and Right turn lanes would be constructed along all approaches and a wide median that would allow for dual left-turn lanes on both Northstar Boulevard and U.S. Route 50. The intersection at U.S. Route 50 is an interim condition that is ultimately planned to be interchange but not part of this project. The southern terminus of this project at Tall Cedars parkway will be a T-intersection that this project would build the northern leg as well as additional improvements south of Tall Cedars Parkway to transition Northstar Boulevard back to the existing two-lane section south of the project limits.

Note: The project analysis above was completed by NVTa staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Enhance quality of life and economic strength
- Reduce congestion and improve travel time
- Increase access to employees, markets, jobs and destinations
- Improve connections among and within areas of regional growth.
- Reduce the amount of traffic moving through these intersections and allow the historic character of the area to remain intact

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTa staff received from the jurisdiction or agency that has applied for funding.

Extend Shellhorn Road: Loudoun County Parkway to Randolph Drive

Project Description

This project entails the continuity of west-east corridor of Shellhorn Road from Waxpool Road (Route 2119) to Sterling Boulevard (Route 846 Extended). Shellhorn Road has been constructed as a 4-lane urban median divided roadway from Waxpool Road (Route 2119) to the intersection of Loudoun County Parkway (Route 607). Shellhorn Road will be extended from the intersection of Loudoun County Parkway (Route 607) to Sterling Boulevard (Route 846 Extended, currently under design), approximately 0.08 miles east of the current intersection of Moran Road and Randolph Road. This multimodal corridor is planned to include an urban median divided 4-lane road, with accommodation for turn lanes with on road bike facilities, within 120 feet of right of way. The project includes 4 new signalized intersections, and 2 signal modifications. This new 1.8-mile-long, major collector road will reconstruct approximately 0.08 miles of Lockridge Road south of the intersection with Prentice Drive with a new roadway segment that will create a T intersection with Shellhorn Road, the north portion of Lockridge Road to the intersection will be reconstructed as part of the Shellhorn Road and Lockridge Road West Project. Shellhorn Road east of the proposed intersection with Lockridge Road will utilize as much as possible of the existing footprint of Lockridge Road and tie-in to the proposed road improvements due to the proposed Loudoun Gateway Metro Station, widening to a 4-lane divided urban facility. A new roadway segment for Shellhorn Road will be built east of the Loudoun Gateway Metro Station to tie to Sterling Boulevard. A new roadway entrance will be provided for the Dulles North Transit Center. The existing Randolph Drive and Moran Road will be relocated to align with the proposed Shellhorn Road. Moran Road will be renamed to Randolph Drive up to the current intersection with Old Ox Road (Route 606). The new major collector road is a critical east west component of the Silver Line District transportation network that will support multimodal access to/from the future Loudoun Gateway and Ashburn Metrorail stations. This roadway will serve as one of the primary routes for potential transit circulator service between the stations connecting travelers to activity centers, Dulles Airport, and the Greenway. The corridor will support a more efficient distribution of east-west traffic, relieving congestion and bottlenecks on parallel roads that are at or over capacity. As a parallel corridor to the Dulles Greenway, it will serve as a relief valve for the other limited supply of east-west collector roadways that are congested due to traffic generated by motorists that avoid the tolled facility. This corridor is an essential component of this area's growth and long-term viability, this east-west corridor will help support mobility for residents, retail patrons, and employees to the transit-oriented developments of the Silver Line Station Areas. Shellhorn Road will include on-street bike lanes and wide sidewalks for pedestrians

Route 28 Northbound Widening: Between Dulles Toll Road and Sterling Boulevard

Project Description

The Route 28 Widening – Area 5 Project consists of the widening of northbound Route 28 from 3 to 4-lanes between the Dulles Toll Road and Sterling Boulevard. An additional thru lane will be added in the northbound direction, and the existing auxiliary lane configurations between the Innovation Avenue, Route 606 and Sterling Boulevard interchanges will be maintained but shifted to the east to accommodate the additional thru lane. The southern terminus will be at the north end of the Route 28 Widening, Area 3 Project that was completed in August 2017 and provided a fourth northbound lane from McLearn Boulevard to the Dulles Toll Road. At the northern terminus of the project, the 4th thru lane will terminate at the loop ramp exit to westbound Sterling Boulevard, although adequate pavement is being constructed to accommodate future extension of the 4th thru lane beyond the Sterling Boulevard interchange.

Prentice Drive Extension: Lockridge Road (Route 789) to Shellhorn Road (Route 643)

Project Description

Prentice Drive (VA Route 1071/VA Route 1071 Extended/Route 789 Extended) will provide an additional east-west connection across Broad Run. This major collector adds approximately 3.2 miles of 4 new through lanes of Prentice Drive from Shellhorn Road at Metro Center Drive to Lockridge Road and includes an additional connection of Lockridge Road West between Waxpool Road and Prentice Drive. The connection will provide multimodal access between the future Loudoun Gateway and Ashburn Metrorail stations. Specifically, the project provides a new alignment extension of Prentice Drive from the intersection with Lockridge Road to the west where it ties into Metro Center Drive at Shellhorn Road. This link will address a critical need for an additional east-west route across Broad Run to relieve congestion on Waxpool Road. Prentice Drive will also provide an alternative option to using the Dulles Greenway Toll Road. Commuters and commercial vehicles avoid the tolls by using a limited supply of collector roads and which thereby creates congestion on those roadways. Preliminary studies have been completed. This will be an urban, four lane divided roadway facility with on street bike lanes, a sidewalk, and a Shared Use path. This corridor is anticipated to serve bus routes to and from the planned Silver Line Metrorail Stations. It will connect Pacific Boulevard (VA Route 1036) to Shellhorn Road (VA Route 643) at Metro Center Drive in the Ashburn Community.

This project will impact and improve the following 5 intersections:

- Shellhorn Road and Metro Center Drive/Prentice Drive
- Lockridge Road West and Prentice Drive
- Waxpool Road and Lockridge Road West
- Loudoun County Parkway and Prentice Drive
- Lockridge Road and Prentice Drive

This project includes a large bridge span across the Broad Run floodplain. The western terminus of this corridor will connect to Metro Center Drive, which will provide direct access to the Loudoun Station Drive and a key greenway overpass that connects the north and south side of the station.

Route 9 Traffic Calming

Town of Hillsboro

Project Description

This project addresses congestion on corridor segment 1/1 of Rt. 7/Dulles Toll Road/Silver Line corridor—a designated NVTA “hot spot”. The project segment supports 16,000 ADT, projected 25,000 ADT by 2038. The project, which has 45% of its total funding secured, is scheduled to begin construction in fall 2018. Securing the balance of funding allows the entire project to be built concurrently and completed in 2020, reducing prolonged negative impacts on commuters, businesses and residents, better accommodating construction MOT and minimizing motorist disruption by building roundabouts first and—leveraging significant economies of scale—saving an estimated \$4 million. The project provides traffic congestion mitigation, traffic-calming measures and pedestrian safety improvements on the Rt. 9 corridor, which bisects the fastest growing agricultural/recreational tourism economy in Northern Virginia.

Reference Number: 2018-027-0

SPA Number: 2018-027-1

TransAction ID: 327

Submitting Jurisdiction/Agency: Loudoun County

Location: Route 9 Corridor in the historic Town of Hillsboro, from 0.070 miles west of Rt. 719 (Stony Point Road) to Rt. 690N (Mountain Road).

Requested NVTA Funds: \$12,112,000

NVTA Funds Received: \$12,112,000

Total Cost to Complete Project: \$22,206,000

The project begins 0.070 miles west of Rt. 719 (Stony Point Road) and ends at Rt. 690N (Mountain Road). The project includes the following side streets: Stony Point (from Rt. 9 south 252'), Gaver Mill Road (from Rt. 9 south 250'), Rt. 690S/Hillsboro Road (from Rt. 9 south 455'). The project includes two roundabouts, minimum 4' sidewalks on north and south sides of Rt. 9, streetscaping, pedestrian lighting, raised and at-grade crosswalks, on-street parking, a closed storm sewer system and a shared-use path connecting to existing and planned area trails. Additional improvements include overhead utility burial with duct banks for future data utilities and installation of a new drinking water main, sanitary sewer main and laterals. A September 2012, VDOT Location and Design Public Hearing was held and design features were approved by the VDOT Chief Engineer. The project's Rt. 9 lane-width reduction to 11', in conjunction with the roundabouts (western at Rt. 9/Rt. 719; eastern at Rt. 9/Rt. 690S), raised and at-grade crosswalks and a 25-mph speed within the Hillsboro limits contribute to the overall traffic-calming effect. The Rt. 9/Rt. 690S roundabouts replace two existing traffic signals, providing improved levels of service, adding additional capacity and providing safety benefits compared to the existing traffic signal levels of service improve from 'F' during AM and PM peak, to a LOS 'B' during AM peak and LOS 'E' during PM peak—a reduction in intersection delay of approximately 86% during AM peak and 58% during PM peak. This improvement reduces current corridor congestion and facilitates additional traffic load that will reroute to Rt. 9 via Rt. 690 as a result of the approved Smart Scale Rt. 7/Rt. 690 interchange, now at 50% design.

The project limits also incorporate an approved Transportation Alternatives grant shared-use-path—GapWay Trail—for connectivity to the historic Hillsboro Town Hall, employment centers, civic and educational institutions. The shared-use path on the north side of Rt. 9 extends from the Rt. 9/Rt. 690S intersection east (0.22 mi.) to Mountain Road (Rt. 690N). The GapWay Trail project includes a crosswalk at the eastern entrance to Hillsboro Cemetery and a sidewalk on the south side of Rt. 9 connecting to the roadway project sidewalk.

Dulles West Boulevard Widening

Loudoun County Parkway to Northstar Boulevard

Project Description

The Dulles West Boulevard project provides for the design, right of way acquisition, and construction of a major collector roadway from Northstar Boulevard to Loudoun County Parkway. The project includes the construction of a four-lane median divided roadway for approximately 2 miles within a 120 foot right of way and six signalized intersections. This project will include the construction or modification of the following at-grade intersections with Dulles Boulevard.

- Northstar Boulevard
- Stone Springs Boulevard
- Arcola Boulevard
- Hutchinson Farm Drive
- Dulles Landing Drive
- Loudoun County Parkway

NVTA Funds Received: \$47,800,000

Total Cost to Complete Project: \$59,314,000

Dulles West Boulevard will allow east/west trips to navigate through the County without adding to the congestion of local streets in the urban growth area. In the future, Route 50 is planned to be limited access and this project will provide local access to businesses and an alternative route to U.S. Route 50 and Evergreen Mills Road. In addition to benefiting vehicular travel, Dulles West Boulevard will be designed to further promote the county's commitment to high quality multimodal facilities and will include a 10' foot shared use path one either side of the roadway to enhance the safety and mobility of pedestrian and bicycle movements. The road also supports the growth and development of the Arcola Center planned mixed use community and provides multimodal links to a planned 200 space park and ride facility, and supports the travel of residents and visitors of this community to access residential neighborhoods, retail, and employment centers.

Evergreen Mills Road Intersection Realignments

Watson Road and Reservoir Road

Project Description

This project realigns 0.3 miles of Evergreen Mills Road (Route 621) from the bridge over Goose Creek to a point approximately 1,000 feet south of Reservoir Road. It also includes the realignment of Watson Road (Route 860) to align with the intersection of Evergreen Mills Road and Reservoir Road (Route 861). This project will construct right and left turn lanes from Evergreen Mills Road onto Watson Road and Reservoir Road. The project will provide safety improvements along the realigned portion of Evergreen Mills by addressing sight distance deficiencies, wider shoulders, and meet standard curve.

Route 28 Corridor Improvements

Fitzwater Drive to Pennsylvania Avenue

Project Description

The Route 28 Corridor Improvements project consists of widening Route 28 (Nokesville Road) from Fitzwater Drive to Pennsylvania Avenue and the construction of bicycle and pedestrian facilities along the length of the project. Route 28 from Fitzwater Drive to Linton Hall Road will be widened from a 2-lane undivided roadway, to a 4-lane divided roadway, which will include a 10' shared use path on the south side. Route 28 from Linton Hall Road to Pennsylvania Avenue will be widened from a 4-lane undivided roadway to a 6-lane divided roadway, which will include a variable 8' to 10' shared use path and 5' sidewalk. All travel lanes will be 12' wide. The roadway widening and the new pedestrian and bicycle facilities being constructed as part of this project will facilitate and create multi-modal access to the VRE Broad Run Station. Specifically, multi-modal access will be provided to the VRE Broad Run Station. The project length is approximately 4.4 miles long. Funds requested will be used for the construction phase of the project.

Regional Impacts

- Increase accessibility and mobility of people
- Increase capacity throughout the corridor
- Improve multi-modal access to the Broad Run VRE Station and other transit facilities along Route 28
- Provide new roadway and multi-modal facilities
- Provide bicycle and pedestrian facilities
- Increase integration between modes and systems
- Improve travel time reliability
- Improve access to jobs, employees, and key destinations.

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTa staff received from the jurisdiction or agency that has applied for funding.

Route 28 Corridor Feasibility Study

Environmental Impact Statement

(City of Manassas to Fairfax County)

Project Description

The Route 28 Corridor Feasibility Study – Environmental Impact Statement (City of Manassas to Fairfax County) project, consists of completing the National Environmental Policy Act (NEPA) process to select a preferred alternative and complete a Record of Decision for the Route 28 Corridor Improvement Project, from the City of Manassas to Fairfax County. This project involves preparation of an Environmental Impact Statement (EIS) following the NEPA process. The EIS will be administered by the Prince William County Department of Transportation in partnership with the Virginia Department of Transportation (VDOT). The funding requested for this project will continue the Route 28 Corridor Feasibility Study, also known as the Route 28 (Manassas Bypass) Godwin Drive Extension Study that was previously funded using NVTA 70% Regional Revenue Funding. The Route 28 Corridor Feasibility Study began by identifying and evaluating 14 preliminary alternatives. As part of the EIS, these 14 preliminary alternatives will be further reviewed. The EIS may identify additional alternatives during the study. After the conclusion of the NEPA process and completion of the EIS, Prince William County will select a preferred build alternative for the Route 28 Corridor Improvements Project, which will proceed to design and construction.

Regional Impacts

- Identify a build alternative, which will ultimately lead to the design and construction of improvements along the Route 28 corridor, between the City of Manassas Line and Fairfax County Line.

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Construct Route 28 Corridor Roadway Improvements

Project Description

The Route 28 Corridor Roadway Improvements project consists of funding the design and construction of corridor improvements along Route 28, from the City of Manassas to Fairfax County. Construction of the project will include right-of-way acquisition, utility relocations, and the securing of additional environmental permits and approvals. After the conclusion of the National Environmental Policy Act (NEPA) process and completion of the Environmental Impact Statement (EIS), Prince William County will have selected a preferred build alternative for the Route 28 Corridor Improvements project, which will proceed to design and construction.

Construct Interchange at Route 234 and Brentsville Road

Project Description

This project consists of constructing an interchange at the intersection of Route 234 (Prince William Parkway/Dumfries Road) and Brentsville Road. The project will include the construction of a bridge to grade separate the intersection of Prince William Parkway and Brentsville Road. The project will convert the intersection of Prince William Parkway at Bradley Cemetery Way to a continuous green-T intersection, and will include the realigning of Brentsville Road to provide a through roadway to Dumfries Road. The new bridge will provide free-flow movements and will eliminate delay for southbound Prince William Parkway (Rt. 234) to eastbound Prince William Parkway (Rt. 294), as well as westbound Prince William Parkway (Rt. 294) to southbound Dumfries Road (Rt. 234). At the continuous Green-T intersection on Prince William Parkway (Rt. 294) and Bradley Cemetery Way, the eastbound direction will be free-flowing, which allows additional green time to be provided to other movements. Brentsville Road will be rerouted to align with the intersection of Prince William Parkway and Dumfries Road and will operate under a three-phase signal control. Funding requested for this application will cover all phases of the project. This intersection was reviewed under the VDOT Strategically Targeted Affordable Roadway Solutions (STARS) program, which is used to develop comprehensive, innovative transportation solutions to improve congestion and solve traffic and safety challenges in the State of Virginia. VDOT has invested \$400,000 in studying the Prince William Parkway Corridor for potential improvements to major intersections.

Construct Interchange at Prince William Parkway University Boulevard

Project Description

This project consists of constructing intersection improvements at the intersection of Prince William Parkway (Route 234) and University Boulevard. The project will be designed and constructed as a quadrant roadway (QR) intersection, which is known as an innovative intersection by the Virginia Department of Transportation.

As part of the project, left turns will not be permitted at the main intersection and vehicles will use the connector road and secondary intersections to complete left turn movements. Removing left turns from the main intersection will allow this intersection to operate under a two-phase signal control, which will increase green time on Prince William Parkway and University Boulevard. The design will include signaling two new intersections at the terminus of the new connector road. This intersection was reviewed under the VDOT Strategically Targeted Affordable Roadway Solutions (STARS) program, which is used to develop comprehensive, innovative transportation solutions to improve congestion and solve traffic and safety challenges in the State of Virginia. VDOT has invested \$400,000 in studying the Prince William Parkway Corridor for potential improvements to major intersections.

Summit School Road Extension and Telegraph Road Widening

Project Description

This project consists of extending Summit School Road from where it currently dead-ends to connect with Telegraph Road as a 4-lane divided roadway. Telegraph Road will also be widened from 2 lanes to 4 lanes between the new Summit School Road connection and the Horner Road Commuter Lot, and from Caton Hill Road to Prince William Parkway. The total length of the project is approximately 1.25 miles. The Summit School Road extension and Telegraph Road widening will consist of four travel lanes, a median, a 5' sidewalk and 10' shared use path. The project will include signalizing the new Summit School Road and Telegraph Road intersection. Funding requested for this project will cover all phases of the project.

Construct Interchange at Prince William Parkway and Clover Hill Road

Project Description

This project consists of constructing improvements at the intersection of Prince William Parkway (Route 234) and Clover Hill Road. Prince William Parkway at Clover Hill Road will be converted from an existing conventional intersection to a bowtie intersection. Left turns will not be permitted at the main intersection and vehicles must turn right or continue straight and use downstream roundabouts to complete left turn movements. Removing left turns from the main intersection will allow the intersection to operate under a two-phase signal control, which increases green time on Prince William Parkway and the overall intersection. The roundabouts will be designed to accommodate large trucks and will be spaced to provide appropriate storage for queuing. The project will also include the construction of a 10' shared use path along Clover Hill Road. This intersection was reviewed under the VDOT Strategically Targeted Affordable Roadway Solutions (STARS) program, which is used to develop comprehensive, innovative transportation solutions to improve congestion and solve traffic and safety challenges in the State of Virginia. VDOT has invested \$400,000 in studying the Prince William Parkway Corridor for potential improvements to major intersections.

Mill Street NE Parking Garage

Project Description

The Town of Vienna is planning to purchase 43,000 square feet of floor area in a proposed building at 223 Mill Street NE, as a capital asset, to be used for public parking. The project is located between Church Street NE and Ayr Hill Ave NE near the center of pedestrian and commercial activity of the Town. It conveniently located about 800 feet from the nearest Fairfax Connector bus stop on Maple Ave E and 360 feet from the W & OD bike/pedestrian trail that runs through town. On the site currently is a single story commercial building that will be removed and a new building will be built to include structured parking by a private developer. The Town is not involved in the management nor construction of this project; this is a fee simple purchase of a capital asset.

Requested NVTA Funds: \$2,300,000

NVTA Funds Received: \$2,300,000

Total Cost to Complete Project: \$4,600,000

This project will provide approximately 120 public parking spaces of which 60 spaces can be made available to Metro commuters, car-poolers and/or cyclists. The Vienna/Oakton metro parking garages regular fill to capacity and the Tysons Stations do not provide any public parking; this project supplies additional parking and improves access for users of the Metro system. Being located close to Maple Ave and close to a Fairfax Connector stops, this garage provides connectivity to mass transit and provides alternative links to two nearby Metrorail stations (Vienna/Oakton Station and Greensboro Station) as well as easy access to the W&OD trail for bicycle commuters.

Project Milestones

	Before FY2018	FY2018	FY2019	FY2020	FY2021	FY2022	FY2023	After FY2023
Capital Asset Acquisitions			X					

Project Funding

	Requested NVTA Funds	NVTA Funds Received	Other Funding Sources	Total Cost by Phase
Capital Asset Acquisitions	\$2,300,000	\$2,300,000	\$2,300,000 (G.O. Bond)	\$4,600,000
TOTAL:	\$2,300,000	\$2,300,000	\$2,300,000	\$4,600,000

Project Analysis Highlights

Congestion Reduction Relative to Cost Ratio (Total Cost in \$1000's):	13.85
Congestion Reduction Relative to Cost Ratio Rank (Total Cost in \$1000's):	35
TransAction Project Rating:	52.73
TransAction Project Rating Rank:	56

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Reduce congestion in the corridor
- Provide access to multimodal options
- Improve access to jobs, employees, markets, and destinations by providing interconnection of roadway, bus, transit, pedestrian and bicycle facilities.

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.

Crystal City Station Improvements

Project Description

This project includes removal of the existing VRE Crystal City Station and providing a new expanded station that can serve full-length VRE trains on two tracks. The station will have two pedestrian grade-separated access points to Crystal Drive, one at the south end of Crystal City Water Park and the other through the Crystal Park office complex. The new station location will enhance connectivity to the local and regional transportation network including more convenient and safer access to the Crystal City Underground, bicycle/bikeshare infrastructure, the proposed second entrance to Crystal City Metro station, the Crystal City-Potomac Yard transitway, kiss-and-ride area, and the proposed walkway to National Airport including the Metro station. Necessary track relocations in the station area will be undertaken to accommodate the new platform. This project will be coordinated with the Commonwealth of Virginia's Atlantic Gateway Initiative that will provide a fourth track between Alexandria and the Potomac River.

Reference Number: 2018-058-1

SPA Number: 2018-058-2

TransAction ID: 298

Submitting Jurisdiction/Agency: Virginia Railway Express (VRE)

Location: Existing VRE Crystal City Station: 1503 South Crystal Drive, Arlington, VA 22202; and an expanded VRE Station located about half a mile south with two access points to Crystal Drive and related CSXT track relocations.

Requested NVTA Funds: \$4,000,000

NVTA Funds Received: \$4,000,000

Previous NVTA Funds Received: \$400,000

Total Cost to Complete Project: \$41,810,000

TOTAL:	\$4,000,000	\$4,000,000	\$1,410,000	\$41,810,000

Note: This project has a funding gap of \$36,400,000.

Project Analysis Highlights

Congestion Reduction Relative to Cost Ratio (Total Cost in \$1000's):	6.92
Congestion Reduction Relative to Cost Ratio Rank (Total Cost in \$1000's):	43
TransAction Project Rating:	63.91
TransAction Project Rating Rank:	53

Note: The project analysis above was completed by NVTA staff using data and information from the project application and analyses of the region's transportation network.

Regional Impacts

- Enhance station capacity and convenience for passengers
- Expand railroad capacity, operational flexibility, and resilience
- Improve reliability and on-time performance
- Reduce highway congestion
- Reduce transportation-related air pollution

Note: The regional impacts listed above are a summary of what was submitted in the project application NVTA staff received from the jurisdiction or agency that has applied for funding.
